Wetland Landscape Characterization Ricardo D. Lopez, John G. Lyon, Lynn K. Lyon, Debra K. Lopez, 2013-03-27 Wetlands are by their very nature ephemeral and transitional which makes them challenging to characterize Yet the need for characterizing wetlands continues to grow particularly as we develop a better understanding of the wealth of ecosystem services that they provide This book provides practical tools and methods to help practitioners more effectively locate identify and map the extent of wetlands and therefore better understand the importance of wetlands to society and the larger landscape The authors address jurisdictional regulatory and practical applications from the scientific engineering and lay perspectives Numerous techniques examples figures and lessons learned supply the ideas and solutions needed for solving the complex issues associated with wetlands This second edition has been updated throughout and includes more techniques examples and illustrations

Ecology, Soils, and the Left Salvatore Engel-Di Mauro, 2014-05-07 Soil degradation is real and global even if the evidence is not so easy to glean Degradation poses comparable risks to greenhouse gas emissions deforestation and nonhuman animal extinctions Few have noticed soil

degradation as the problem it has become except most indigenous peoples in their struggles for survival **Urban Soils**

Andrew W. Rate, 2022-01-07 This textbook addresses the increasing trend in urbanization of the world's population and its relation with urban soils. Written by active practitioners of university level teaching and research, this book is designed primarily as an educational text while it also provides readers with an authoritative gateway to the primary literature. It includes explicit coverage of spatial and statistical multivariate techniques and case studies to illustrate key concepts and to support practical guidance in issues such as data collection and analysis. The authors reflect current developments in research and urban trends. In China, for example, the proportion of the population living in cities increased from 13% in 1950 to 45% in 2010. World Bank data shows Australia is one of the world's top ten urbanised countries with population greater than ten million, with approximately 90% of its population living in cities, mainly along Australia's coast. The most rapidly urbanising populations are currently in nations of the African continent. Soils in urban areas have multiple functions which are becoming more valued by urban communities: soils supply water, nutrients and physical support for urban plant and animal communities; parks, reserves, gardens and are becoming increasingly valued for growing food. Soils may be used for building foundations or as building materials themselves. Urban hydrology relies on the existence of unsealed soils for aquifer protection and flood control. This volume presents the importance of urban ecosystems and the impacts of global change. It examines pedogenesis of urban soils, natural materials affected by urban phenomena and natural processes acting on urban materials, including an examination of different climatic zones. There is a focus on soils formed on landfill, reclaimed land, dredge spoils, as well as soil related changes in urban geomorphology. There is plenty of discussion on urban soil as a source and sink, as well as soil geochemistry and health. The book is intended primarily as a text for upper level undergraduate and postgraduate Masters students. It will also be invaluable as a resource for professionals such as researchers, environmental regulators and environmental consultants.

Let the Water Do the Work Bill Zeedyk, Van Clothier, 2014. Let the Water Do the Work is an important contribution to riparian restoration. By thinking like a creek, one can harness the regenerative power of floods to reshape stream banks and rebuild floodplains along gullied stream channels. Induced Meandering is an artful blend of the natural sciences: geomorphology, hydrology and ecology, which govern channel forming processes. Induced Meandering directly challenges the dominant paradigm of river and creek stabilization by promoting the intentional erosion of selected banks while fostering deposition of eroded materials on an evolving floodplain. The river self-heals as the growth of native riparian vegetation accelerates the meandering process. Not all stream channel types are appropriate for Induced Meandering, yet the Induced Meandering philosophy of going with the flow can inform all stream restoration projects. Induced meandering strives to understand rivers as timeless entities governed by immutable rules serving their watersheds, setting their own timetables and coping with their own realities as they carry mountains grain by grain to the sea. Anyone with an interest in natural resource management in these uncertain times should read this book and put these ideas to work.
