HISTORY Medicinal plants have a long and illustrious history stretching back thousands of years with their use documented in ancient civilizations such as India Egypt China and Arabia India known for its Ayurvedic heritage has oral traditions concerning medicinal herbs dating back as far as 6 000 BC The rich history of medicinal plants is entwined with ancient civilizations like India Egypt China and Arabia and these plants valued for their therapeutic properties continue to play a significant role in the prevention and treatment of human ailments Petrovska 2012 *Health Benefits of Secondary Phytocompounds from Plant and Marine Sources* Hafiz Ansar Rasul Suleria, Megh Goyal, 2021-01-20 This new volume Health Benefits of Secondary Phytocompounds from Plant and Marine Sources looks at a selection of important issues and research topics on phytochemicals in plant based therapeutics covering bioactive compounds from both plant and marine sources Natural products and their bioactive compounds are increasingly utilized in preventive and therapeutic medication as pharmaceutical supplements as well as in functional foods and nutraceuticals all of which have potentially positive effects on health and have preventive and curative properties for various diseases and health conditions The first section of the book on Bioactive Compounds from Plant Sources describes the concept of extraction of bioactive molecules from plant sources both conventional and modern extraction techniques available sources biochemistry structural composition and potential biological activities Advanced extraction techniques such as enzyme assisted microwave assisted ultrasound assisted pressurized liquid extraction and super critical extraction techniques are described in detail **The Fig** Ali

Sarkhosh, Alimohammad Yavari, Louise Ferguson, 2022-04-27 The common fig *Ficus carica* L is an ancient fruit native to the Mediterranean Dried figs have been successfully produced and processed in arid regions with little sophisticated infrastructure for centuries Figs are rich in fibre trace minerals polyphenols and vitamins with higher nutrient levels than most fruits Advances in agricultural production and postharvest technologies have not only improved the efficiency of dried fig production but have facilitated the development of high value fresh fig industries both for export and domestic markets The result is high quality fresh figs that are marketed internationally throughout the year This book provides a comprehensive summary of fig growing processing and marketing from a scientific and horticultural perspective

Eco-Friendly Corrosion Inhibitors Lei Guo, Chandrabhan Verma, Dawei Zhang, 2022-06-21 Eco Friendly Corrosion Inhibitors Principles Designing and Applications wraps up new developments in corrosion inhibitors and their current applications in real life environments such as in strong acidic pickling and petroleum based liquids The book covers several types of environmentally friendly corrosion inhibitors in detail In addition it highlights both established research and

technology on industrial scale corrosion inhibitors and their rapidly emerging aspects and future research directions Provides fundamental basics and applied practices of corrosion prevention at industrial scale Serves as a valuable reference for scientists and engineers who are searching modern design for industrial scale corrosion inhibitors Focuses on the most advanced industrial scale corrosion inhibitors including current challenges during manufacturing Includes up to date reference material such as websites of interest and information about the latest research

Herbal Drugs and Fingerprints Devi Datt Joshi, 2012-11-02 Evidence based herbal drugs are on hi acceptance day by day due to health friendly nature compared to synthetic drugs The active ingredients in herbal drugs are different chemical classes e g alkaloids coumarins flavonoids glycosides phenols steroids terpenes etc are identified at molecular level using current analytical practices which are unique characteristic as finger so known as fingerprints The fingerprints are used for assessment of quality consistency and stability by visible observation and comparison of the standardized fingerprint pattern have scientific potential to decipher the claims made on these drugs for authenticity and reliability of chemical constituents with total traceability which starts from the proper identification season and area of collection storage their processing stability during processing and rationalizing the combinational in case of polyherbal drugs These quality oriented documents have ample scientific logics so well accepted globally by regulatory authorities and industries to determine intentional unintentional contamination adulteration pollutants stability quality etc parameters Based on geo climatic factors a same plant species has different pharmacological properties due to different ingredients such regional and morphological variations are identified by fingerprints at the time of collection of the medicinal herb The chromatographic TLC HPTLC HPLC GC and spectral UV Vis FTIR MNR MS LC MS GC MS etc techniques have world wide strong scientific approval as validated methods to generate the fingerprints of different chemical classes of active ingredients of herbal drugs Presently there is a need for a book having all the fingerprinting techniques for herbal drugs at a place with theory case studies and art to discover patentable forms The present book is a mile stone in the subject to be utilized by Scientists Medical Doctors Technicians Industrialists Researchers and Students both in PG and UG levels

proprieties of various fruits Given its scope the book will be of interest to graduate and post graduate students research scholars academics pomologists and agricultural scientists alike Those working in various fruit processing industries and other horticultural departments will also find the comprehensive information relevant to their work

An Integrated Approach for Added-Value Products from Lignocellulosic Biorefineries Alírio Egídio Rodrigues, Paula Cristina de Oliveira Rodrigues Pinto, Maria Filomena Barreiro, Carina Andreia Esteves da Costa, Maria Inês Ferreira da Mota, Isabel Fernandes, 2018-10-01 This book offers the state of the art on the progress and accomplishments of 25 years of research at the Associate Laboratory LSRE LCM Laboratory of Separation and Reaction Engineering Laboratory of Catalysis and Materials on lignin conversion to value added products and their downstream separation The first valorisation pathway presented for lignin is its partial depolymerisation by oxidation for the production of low molecular weight phenolic compounds such as vanillin and syringaldehyde and the second one is the lignin application as macromonomer for polyurethane synthesis In this book the authors present the integration of these two valorisation pathways as an exclusive vision of LSRE LCM resulting from hands on experience on reaction and separation processes the integrated process for lignin valorisation In this perspective the lignin is oxidized to simultaneously produce syringaldehyde and vanillin and the obtained by products to produce a polyol for lignin based polyurethanes completing the lignin value chain On the perspective of pulp mill related biorefineries a valorisation route for eucalyptus bark is also presented focusing on LSRE LCM experience on extraction and separation of bioactive polyphenols giving some insights about further integration of extracted bark on biorefining operations

Handbook of Food Bioactive Ingredients Seid Mahdi Jafari, Ali Rashidinejad, Jesus Simal-Gandara, 2023-09-13 Bioactive ingredients including both bioactive compounds and bioactive live organisms are present in small amounts in natural sources such as fruits and vegetables These ingredients have been continuously investigated during the last few decades and the epidemiological data suggest that their intake is associated with significant decreased risk of various disorders and chronic diseases owing to their anti oxidant anti bacterial and anti inflammatory qualities Some of these natural ingredients such as catechins curcumin resveratrol oleuropein quercetin rutin hesperidin sulforaphane ellagic acid and anthocyanins have been studied as factors with possible direct or indirect effect on specific molecular pathways which are playing vital roles in the association with the pathophysiology of the chronic diseases such as cancer In light of this natural foods and food derived products rich in bioactives have received recent growing attention It has been reported that frequent consumption of fruits vegetables and their associated natural products have many health promoting benefits that protect against degenerative illnesses including heart disease arthritis cancer immune system decline brain dysfunction inflammation and cataracts Functional foods and

medicinal supplements containing encapsulated bioactive materials will be the future of new emerging products in the food and pharma industries. Such products present therapeutical and medicinal properties that can prevent and or cure specific chronic diseases and disorders. Handbook Of Bioactive Ingredients provides a systematic overview of different food bioactive ingredients describing their chemistry, structure, functionality, safety, toxicity, oral delivery and their applications in functional foods. Detailed chapters will describe various bioactive ingredients including polyphenolic compounds such as phenolic acids, flavonoids and anthocyanins, carotenoids, sterols such as non oxygenated carotenoids, xanthophylls and phytosterols, bioactive peptides such as marine bioactive peptides, animal bioactive peptides, plant bioactive peptides, microbial bioactive peptides, essential fatty acids like fish and marine oils and plant oils, live organisms like probiotics and yeasts, essential oils and oleoresins like monoterpenes, sesquiterpenes and oleoresins, vitamins and minerals including liposoluble vitamins, hydrosoluble vitamins and trace minerals and other bioactive compounds including prebiotics, oligosaccharides, dietary fibers and beta glucan. This book is the first comprehensive collection of scientific evidence from published literature on natural bioactive ingredients.

Medicinally Important Trees Aisha Saleem Khan, 2017-06-07. This book provides researchers and advanced students associated with plant and pharmaceutical sciences with comprehensive information on medicinal trees including their identification, morphological characteristics, traditional and economic uses along with the latest research on their medicinal compounds. The text covers the ecological distribution of over 150 trees which are characterized mainly on the basis of their unique properties and phytochemicals of medicinal importance i.e. anti allergic, anti diabetic, anti carcinogenic, anti microbial and possible anti HIV compounds. Due to the incredibly large diversity of medicinal trees it is not possible to cover all within one publication so trees with unique medicinal properties that are relatively more common in many countries are discussed here in order to make it most informative for a global audience. With over 100 illustrations taken at different stages of plant development, this reference work serves as a tool for tree identification and provides morphological explanations. It includes the latest botanical research including biochemical advancements in phytochemistry techniques such as chromatographic and spectrometric techniques. In addition, the end of each chapter presents the most up to date references for further sources of exploration.

High-Throughput Plant Metabolomics Jen-Tsung Chen, 2025-06-27. This book summarizes the current achievements of metabolomics in revealing the roles of primary and secondary metabolisms of plants both used as major crops and for the production of medicines. It presents methods and applications of metabolomics for the exploration of stress responses which may pave the way for obtaining climate smart and stress tolerant crops able to face biotic and abiotic stressors in a globally changing climate. These technologies can advance the exploration of plant physiology as well as precision crop breeding for future anti stress, high quality and high yield plants and in doing so can achieve sustainable

agriculture and therefore support the Sustainable Development Goals the Paris Agreement and the vision of sustainable agriculture This book is an ideal reference for students researchers teachers professors and experts in the field of plant science and crop breeding It provides an effective overview of the critical topic of plant science and will help to inspire and assist researchers as they design new experiments and methods
