Romero, Javier Pérez-Jara, Lino Camprubí, 2022-06-01 This book provides an up to date revision of materialism's central tenets its main varieties and the place of materialistic philosophy vis a vis scientific knowledge Materialism has been the subject of extensive and rich controversies since Robert Boyle introduced the term for the first time in the 17th century But what is materialism and what can it offer today The term is usually defined as the worldview according to which everything real is material Nevertheless there is no philosophical consensus about whether the meaning of matter can be enlarged beyond the physical As a consequence materialism is often defined in stark exclusive and reductionist terms whatever exists is either physical or ontologically reducible to it This conception if consistent mutilates reality excluding the ontological significance of political economic sociocultural anthropological and psychological realities Starting from a new history of materialism the present book focuses on the central ontological and epistemological debates aroused by today's leading materialist approaches including some little known to an anglophone readership The key concepts of matter system emergence space and time life mind and software are checked over and updated Controversial issues such as the nature of mathematics and the place of reductionism are also discussed from different materialist approaches As a result materialism emerges as a powerful indispensable scientifically supported worldview with a surprising wealth of nuances and possibilities

space and scale An invitation to rethink how we understand understanding itself this is a work for readers who seek to cross boundaries between disciplines between worlds and between the visible and the hidden *The Renaissance of Science* Albert Martini,2014-09-01 The Magnificent Scientists and their Fabulous Accomplishments A Fantastic Dream and Journey into the Past Present and Future In the World of Chemistry *The Problem of the Earth's Shape from Newton to Clairaut* John L. Religion and the Order of Nature Seyyed Hossein Nasr,1996 Nasr argues that the current ecological crisis has been exacerbated by the reductionist view of nature that has been advanced by modern secular science What is needed he believes is the recovery of the belief that nature is sacred

Science as a Quest for Truth Bengt Kristensson Ugglä,2024-01-05 This book presents a unified theory of science by challenging some of the lingering myths and anachronisms associated with our understanding of what it means to be scientific The book presents a new science narrative focused on the dialectics of discovering inventing new worlds in an age of hermeneutics and as an alternative to the prevailing view of the history of science as largely a confrontation between science and religion It argues that the development of modern science is in a complex way intertwined with the history of the university a knowledge institution that

throughout the centuries has repeatedly managed to reinvent itself so successfully indeed that it has paradoxically led to a fundamental crisis of identity today The book suggests that in order to recognize science as a quest for truth in a globalizing world of cognitive horizontalization we need to transcend the false alternatives of objectivistic certitude possessing the Truth and relativistic resignation post truth by means of a new focus on collegial practices
