What Is Life The Intellectual Pertinence Of Erwin Schrödinger:

What is Life? Hans Ulrich Gumbrecht, Robert B. Laughlin, 2011 In this volume four leading American scientists and humanists unfold the controversial potential of Schrödinger's thought

What is Life? On Earth and Beyond Andreas Losch, 2017-07-13 Approaches from the sciences philosophy and theology including the emerging field of astrobiology can provide fresh perspectives to the age old question what is life Has the secret of life been unveiled and is it nothing more than physical chemistry Modern philosophers will ask if we can even define life at all as we still don't know much about its origins here on Earth Others regard life as something that cannot simply be reduced to just physics and chemistry while biologists emphasize the historical component intrinsic to life on Earth How can theology constructively interpret scientific findings Can it contribute constructively to scientific discussions Written for a broad interdisciplinary audience this probing volume discusses life intelligence and more against the background of contemporary biology and the wider contexts of astrobiology and cosmology It also considers the challenging implications for science and theology if extraterrestrial life is discovered in the future

Origin of Life via Archaea Richard Gordon, 2024-10-01 This book surveys the models for the origin of life and presents a new model starting with shaped droplets and ending with life as polygonal Archaea it collects the most published micrographs of Archaea discovered only in 1977 which support this conclusion and thus provides the first visual survey of Archaea Origin of Life via Archaea's purpose is to add a new hypothesis on what are called shaped droplets as the starting point for flat polygonal Archaea supporting the Vesicles First hypothesis The book contains over 6000 distinct references and micrographs of 440 extant species of Archaea 41% of which exhibit polygonal phenotypes It surveys the intellectual battleground of the many ideas of the origin of life on earth chemical equilibrium autocatalysis and biotic polymers This book contains 17 chapters some coauthored on a wide range of topics on the origin of life including Archaea's origin patterns and species It shows how various aspects of the origin of life may have occurred at chemical equilibrium not requiring an energy source contrary to the general assumption For the reader's value its compendium of Archaea micrographs might also serve many other interesting questions about Archaea One chapter presents a theory for the shape of flat polygonal Archaea in terms of the energetics at the surface edges and corners of the S layer Another shows how membrane peptides may have originated The book also includes a large table of most extant Archaea that is searchable in the electronic version It ends with a chapter on problems needing further research Audience This book will be used by astrobiologists origin of life biologists physicists of small systems geologists biochemists theoretical and vesicle chemists

[The Rigor of Angels](#) William Egginton, 2025-03-04 A NEW YORK TIMES AND NEW YORKER BEST BOOK OF THE YEAR A poet a physicist and a philosopher explored the greatest enigmas in the universe the nature of free will the strange fabric of the cosmos the true limits of the mind and each in their own way uncovered a revelatory truth about our place in the world A mind expanding book Elegantly written The New York Times A remarkable synthesis of the thoughts ideas and discoveries of three of the

greatest minds that our species has produced John Banville The Wall Street Journal Argentine poet Jorge Luis Borges was madly in love when his life was shattered by painful heartbreak But the breakdown that followed illuminated an incontrovertible truth that love is necessarily imbued with loss that the one doesn't exist without the other German physicist Werner Heisenberg was fighting with the scientific establishment on the meaning of the quantum realm's absurdity when he had his own epiphany that there is no such thing as a complete perfect description of reality Prussian philosopher Immanuel Kant pushed the assumptions of human reason to their mind bending conclusions but emerged with an idea that crowned a towering philosophical system that the human mind has fundamental limits and those limits undergird both our greatest achievements as well as our missteps Through fiction science and philosophy the work of these three thinkers coalesced around the powerful haunting fact that there is an irreconcilable difference between reality out there and reality as we experience it Out of this profound truth comes a multitude of galvanizing ideas the notion of selfhood free will and purpose in human life the roots of morality aesthetics and reason and the origins and nature of the cosmos itself As each of these thinkers shows every one of us has a fundamentally incomplete picture of the world But this is to be expected Only as mortal finite beings are we able to experience the world in all its richness and breathtaking majesty We are stranded in a gulf of vast extremes between the astronomical and the quantum an abyss of freedom and absolute determinism and it is in that center where we must make our home A soaring and lucid reflection on the lives and work of Borges Heisenberg and Kant The Rigor of Angels movingly demonstrates that the mysteries of our place in the world may always loom over us not as a threat but as a reminder of our humble humanity

Invitation To Generalized Empirical Method: In Philosophy And Science Terrance J Quinn, 2016-12-28 Bernard Lonergan identified the need and possibility of what he called generalized empirical method in science and philosophy Implementation will be a future community achievement The book enters into details of a selection of examples in the sciences and philosophy of science These are provided not to engage in or blend the present aim with traditional philosophical debate but as points of entry to help reveal the possibility and need of balanced empirical method Taking words of Lonergan Questions of method are practical So my purpose in these chapters is not to demonstrate what is necessary It is not to forecast what is probable It is to invite you to share in the exploration of a proposal Bernard Lonergan A Third Collection 1985 114 The main examples are drawn from biochemistry and biology although heuristics envisioned will include all sciences

Science, Technology, and Irish Modernism Kathryn Conrad, C  il  n Parsons, Julie McCormick Weng, 2019-09-13 Since W B Yeats wrote in 1890 that the man of science is too often a person who has exchanged his soul for a formula the anti scientific bent of Irish literature has often been taken as a given Science Technology and Irish Modernism brings together leading and emerging scholars of Irish modernism to challenge the stereotype that Irish literature has been unconcerned with scientific and technological change The collection spotlights authors ranging from James Joyce Elizabeth Bowen Flann O'Brien and Samuel Beckett to less studied writers like Emily Lawless John Eglington Denis Johnston and Lennox

Robinson With chapters on naturalism futurism dynamite gramophones uncertainty astronomy automobiles and more this book showcases the far reaching scope and complexity of Irish writers engagement with innovations in science and technology Taken together the fifteen original essays in Science Technology and Irish Modernism map a new literary landscape of Ireland in the twentieth century By focusing on writers often ignored interest in science and technology this book uncovers shared concerns between revivalists modernists and late modernists that challenge us to rethink how we categorize and periodize Irish literature

The New Human in Literature Mads Rosendahl Thomsen,2013-09-26

Twentieth century literature changed understandings of what it meant to be human Mads Rosendahl Thomsen in this historical overview presents a record of literature s changing ideas of mankind questioning the degree to which literature records and creates visions of the new human Grounded in the theory of Niklas Luhmann and drawing on canonical works Thomsen uses literary changes in the mind body and society to define the new human He begins with the modernist minds of Virginia Woolf Williams Carlos Williams and Louis Ferdinand Celine s discusses the society changing concepts envisioned by Chinua Achebe Mo Yan and Orhan Pamuk He concludes with science fiction discussing Don DeLillo and Michel Houellebecq s ideas of revolutionizing man through biotechnology This is a study about imagination aesthetics and ethics that demonstrates literature s capacity to not only imagine the future but portray the conflicting desires between individual and various collectives better than any other media A study that heightens reflections on human evolution and posthumanism

Evolution Somnath Bhattacharyya,2023-09-29 This book reconceptualizes the ancient philosophy of dualism and a trinity applied to classical and quantum nonequilibrium phenomena In addition to classical mechanics and electrodynamics a remarkable connection of this philosophy with quantum mechanics is established which can be useful for quantum computing and the development of quantum artificial intelligence Packed with the recent theoretical models quantum simulations of black holes and experimental observations of quantum phase transitions this book brings a holistic approach that can be useful to refine the concept of the Creation i e the evolution of the Universe from the condensed state of matter and explain the artificial vision The approach is Unique Connects ancient philosophy classical and quantum mechanics materials and the latest quantum technologies Novelty High level of scientific interpretation of ancient philosophy creation interactions and disorder Multidisciplinary Guides students to learn quantum simulations and develop philosophical ideas The book contains over ten years of in depth research by the author on the ancient eastern Indian philosophy and the latest scientific research in condensed matter and quantum technology This book will simplify the picture of ancient eastern philosophy which can be read by the general audience particularly undergraduate postgraduate students interested in quantum information science without any mathematical treatment However some parts of the book will be ideal for senior academicians and professional researchers in both worlds

Re-framing Regional Development Philip Cooke,2013-01-17 Turbulence characterises the current global scene This book uses complementary theoretical approaches to understand and help prescribe policies to re

frame the regional development problem in turbulent times These approaches are evolutionary complexity evolutionary economic geography emergence theory and resilience theory From below they address the four major crises creating a perfect storm for societies and economics involving the climate change crisis the energy crisis the banking and financial crisis and the global economic crisis This book analyses and proposes ways in which regional economies in particular are having to be reframed to address these crises First many must evolve in new ways possibly moving back from the service economy towards a new greener form of manufacturing of goods as well as services Accordingly regional economies are innovating in new ways Amongst these are the quest for relatedness within their own regional orbits and promoting modularity as a mode of analysis and a policy stance to stimulate innovation across industry and geographical borders Finally regional economies and societies are discovering that from a resilience perspective they must find answers to the higher levels of governance with which they increasingly struggle In this respect regional economies are in transition and regional processes are emergent The transition seeks to address the four crises involving re balancing re directing and re framing future policy and practice This book describes many of the novel framings involved in understanding the new ways in which this major task is being addressed in theory policy and everyday practice *Bioaesthetics* Carsten Strathausen, 2017-10-15 In recent years bioaesthetics has used the latest discoveries in evolutionary studies and neuroscience to provide new ways of looking at art and aesthetics Carsten Strathausen s remarkable exploration of this emerging field is the first comprehensive account of its ideas as well as a timely critique of its limitations Strathausen familiarizes readers with the basics of bioaesthetics grounding them in its philosophical underpinnings while articulating its key components Importantly he delves into the longstanding problem of the two cultures that separate the arts and the sciences Seeking to make bioaesthetics a more robust way of thinking Strathausen then critiques it for failing to account for science s historical and cultural assumptions At its worst he says biologism reduces artworks to mere automatons that rubber stamp pre established scientific truths Written with a sensitive understanding of science s strengths and willing to refute its best arguments Bioaesthetics helps readers separate the sensible from the specious At a time when humanities departments are shrinking and when STEM education is on the rise Bioaesthetics makes vital points about the limitations of science while lodging a robust defense of the importance of the humanities **Άγγελου και σκακιστές: Ο Μπόρχες, ο Χάιζενμπεργκ, ο Καντ και η θεμελιώδης φύση της πραγματικότητας** Egginton, William, Πέτρος Γεωργίου, 2025-04-30 Carlo Rovelli Mario Livio The Golden Ratio Merve Emre The New Yorker Sean Carroll The Biggest Ideas in the Universe John Kaag Hiking with Nietzsche
