Calderwood, George Leonard Ferish, 1968 **The Job Guarantee and Modern Money Theory** Michael J. employment program would create a balanced perpetually active labor force providing the macroeconomic stability necessary to define a functioning labor standard Just as the gold standard measured the worth of money against gold reserves John Maynard Keynes argued so a labor standard ought to measure the value of money in terms of its labor equivalent However he failed to account for the fact that unlike a gold standard a labor standard does not have any kind of surety that money will continue to match its value in paid work over time Together the contributors argue that full employment would provide this missing security and allow authorities to define the value equivalencies of money and labor the way that money once represented its exact equivalent in gold

Purposeful Engineering Economics Ronald A. Chadderton, 2015-06-09 Purposeful Engineering Economics stands as a unique and highly original complement to the traditional engineering economics curriculum. This primarily narrative text conveys the essence of an Austrian economic perspective on cash flow analysis and decision making in engineering without extensive tables and graphs and requires very little mathematics. The book's objective is to add a new perspective to the usual study of cash flow analysis and solely econometric engineering decision making. The author draws on the methodology of the Austrian Economists, a school of economic thought that bases its study of economic phenomena on the interpretation and analysis of the purposeful actions of individuals. The book includes an array of illustrative case studies examined in detail by the author and emphasizes the importance of market processes and price signals to coordinate engineering plans.
