*Automotive Industry* Michael D. Johnson,Andreas Herrmann,Frank Huber,Anders Gustafsson,2012-12-06 The intensely  
competitive global automotive industry is in the midst of both a quality evolution and management transfohnation In an  
evolutionary fashion industry attention has progressed from a focus on internal quality to external perceptions of customer  
satisfaction to subsequent customer retention and profitability More transfohnational is the change in the way automotive  
companies operate and manage themselves An industry once dominated at a product level by engineering and a management  
level by fmance is becoming a cross functional customer oriented industry Understanding the links from quality to  
satisfaction to retention has become a key to financial and organizational success as the automotive industry enters the new  
millennium We are fortunate in this regard to have assembled a diverse group of both academic and automotive industry  
contributors to offer a variety of insights into these links After describing the ongoing changes in the automotive industry in  
more detail this introductory chapter describes a framework for linking quality satisfaction and retention The framework is  
used to introduce each of the individual chapters and highlight its contribution Although our primary emphasis is on the  
automotive industry the implications of the research and lessons learned extend far beyond If anything the automotive  
industry is a prototypical competitive global industry that faces a myriad of business issues These include among others

Finin,Steven Willmott,2006-03-30 There is a growing interest in the use of ontologies for multi agent system applications On the one hand the agent paradigm is successfully employed in those applications where autonomous loosely coupled heterogeneous and distributed systems need to interoperate in order to achieve a common goal On the other hand ontologies have established themselves as a powerful tool to enable knowledge sharing and a growing number of applications have benefited from the use of ontologies as a means to achieve semantic interoperability among heterogeneous distributed systems In principle ontologies and agents are a match made in heaven that has failed to happen What makes a simple piece of software an agent is its ability to communicate in a social environment to make autonomous decisions and to be proactive on behalf of its user Communication ultimately depends on understanding the goals preferences and constraints posed by the user Autonomy is the ability to perform a task with little or no user intervention while proactiveness involves acting autonomously with no need for user prompting Communication but also autonomy and proactiveness depend on knowledge The ability to communicate depends on understanding the syntax terms and structure and the semantics of a language Ontologies provide the terms used to describe a domain and the semantics associated with them In addition ontologies are often complemented by some logical rules that constrain the meaning assigned to the terms These constraints are represented by inference rules that can be used by agents to perform the reasoning on which autonomy and proactiveness are based     *Automotive Smog Control Manual* Harold T.
