

Document Title: Description	Function Group: 000	Information Type: Service Information	Date: 2015/9/29
Profile: GSD, G710B (G8)			

Description

Intended use

The machine is intended to be used under normal conditions for the operations described in the Operator's Manual. If it is used for other purposes or in potentially dangerous environments, for example, an explosive atmosphere, areas with dust containing asbestos, etc., special safety regulations must be followed and the machine must be equipped for such use. Contact the manufacturer or dealer for further information.

Engine

The engine is a four stroke cycle, in line six cylinder, turbocharged diesel with overhead valves and charge air cooler. These engines are of the low-emission type and all models have VHP (Variable Horsepower).

VHP

All Volvo grader models have engines that provide 2 different power levels depending on the gear selected by the operator.

- For non-All Wheel Drive equipped graders, forward gears 1, 2, and reverse 1, have reduced power to minimize wheel slip. In forward gears 3 through 6, and reverse gears 2 through 4, engine power is automatically increased.
- For All Wheel Drive equipped models with the All Wheel Drive system turned OFF, the function of the VHP is the same as above.
- For All Wheel Drive equipped models with the All Wheel Drive turned ON, the engine power is increased for all gears.
- There is no operator selectable control over the VHP system.

Electrical system

The electrical system is a 24VDC, negative-ground system. Power is supplied by two 12VDC batteries connected in series. Battery charging is accomplished using a standard 75 amp alternator and an optional 100 amp alternator. Electrical power can be disconnected using a ground isolation switch.

Clutch

A multiple wet disc clutch is mounted to the engine flywheel and connected to the transmission with a driveshaft. The clutch must be used when starting to move or when changing direction.

Transmission

The transmission has eight forward and four reverse speeds. It is a fully sequential, direct drive, powershift unit utilizing a countershaft design.

Final drives/tandems

Final drives are single reduction in models G710B to G740B and double reduction in the G760B. Each has an operator controlled lock/unlock differential. Rear axles are case hardened, full floating design, supported on double row spherical roller bearings. Tandem wheels are chain-driven.

Brakes

Hydraulically actuated, oil disc service brakes are located at the four tandem drive wheels. The crossover dual braking circuits provide even braking on both sides of the grader.

If the engine stalls, or hydraulic boost pressure becomes unavailable, full braking capability is available through a reserve system. An electric motor supplies the power required to bring the grader to a safe stop.

The parking brake is a spring apply/hydraulic release, disc-type brake. It is driveline-mounted to the transmission output shaft. An accumulator in the circuit stores system pressure allowing the brakes to remain released in the event of system pressure loss for about 30 minutes.

Steering

The steering system is a closed-center dynamic signal load sensing system. The hydraulic steering system incorporates two steering cylinders. The steering wheel feature and articulated frame can be used to decrease turning radius. There is no manual steering.
