Learning Alex Standish, 2012-05-31 This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com Through the language of global learning education is being reformed by corporations political activists and policy makers Academic subject based knowledge has been cast as elitist and outdated for a rapidly changing world The curriculum has been colonized in the name of teaching skills and attitudes for the global market and global citizenship Can young people effectively contribute to society without an education in academic knowledge Alex Standish argues that we can only educate children about the world if we are clear about the boundaries that provide education with its moral worth These include the boundaries between education and political activity public and private realms education and training theoretical and everyday knowledge communities and subject disciplines The False Promise of Global Learning demonstrates that the nature and purpose of education has become confused with social economic political and therapeutic aims and that control over the curriculum has been taken away from teachers and communities This is a hard hitting work that will resonate with all who have a stake in how and why we educate our children

Understanding Global Climate Change Arthur P Cracknell, Costas A Varotsos, 2021-07-27 Climate change a familiar term today is far more than just global warming due to atmospheric greenhouse gases including CO₂ In order to understand the nature of climate change it is necessary to consider the whole climatic system its complexity and the ways in which natural and anthropogenic activities act and influence that system and the environment Over the past 20 years since the first edition of Understanding Global Climate Change was published not only has the availability of climate related data and computer modelling changed but our perceptions of it and its impact have changed as well Using a combination of ground data satellite data and human impacts this second edition discusses the state of climate research today on a global scale and establishes a background for future discussions on climate change This book is an essential reference text relevant to any and all who study climate and climate change Features Provides a thought provoking and original approach to the science of climate Emphasises that there are many factors contributing to the causation of climate change Clarifies that while anthropogenic generation of carbon dioxide is important it is only one of several human activities contributing to climate change Considers climate change responses needed to be undertaken by politicians and society at national and global levels Totally revised and updated with state of the art satellite data and climate models currently in operation around the globe

Global Energy Strategies James C. White, 2013-11-21 The world is getting warmer Among scientists concerned with global climate change this is the broad consensus How fast and by how much are questions which cannot be answered quantitatively but the probability of rising temperatures must be faced in a prudent manner there is enough certainty of change so that we must anticipate and prepare before irreparable damage is done to our world Even if it isn't going to be as bad as some people think the actions we propose will benefit the earth and give us a kind of insurance The root of the change is population growth and its attendant demand for energy While the developed world expects to hold future emissions relatively steady the developing

countries where population growth is most rampant will expand the use of energy as they aspire to a better quality of life. H greater energy use is inevitable it behooves us to produce that energy in the least objectionable manner and to produce it where the cost is lowest in dollars GNP and environmental change

Global Warming and Agriculture William R Cline, 2007-07-30 How will global warming affect developing countries which rely heavily on agriculture as a source of economic growth William Cline asserts

that developing countries have more at risk such as their production capacity than industrial countries as global warming worsens Using general circulation models Cline boldly examines 2071 99 to forecast the effects of global warming and its economic impact into the next decade This detailed study outlines existing studies on climate change Cline finds the Stern Report for the UK government s estimates most reliable estimates projected changes in temperature precipitation and agricultural capacity and concludes with policy recommendations Cline finds that agricultural production in developing countries may fall an average of 16 percent and if global warming progresses at its current rate India s agricultural capacity could fall as much as 40 percent Thus policymakers should address this phenomenon now before the world s developing countries are adversely and irreversibly affected Encyclopedia of Global Warming and Climate Change S.
