Tropical And Subtropical Fruit Composition Properties And Uses:

Tropical Fruits Carol Kopolow, 1991 **Tropical and Subtropical Fruits** Philip E. Shaw, Harvey T. Chan, Steven Nagy, 1998 *Tropical Fruits* Robert E. Paull, Odilo Duarte, 2011 Volume 2 of this revised edition of *Tropical Fruits* examines the more specialist tropical fruits such as guava, durian, mangosteen, passion fruits and palm fruits. With growing interest in the cultivation, production, study, sales and marketability of these specialist fruits, this is a timely and informative book. Topics like botany, soil and climate requirements, cultivar development, world production and harvesting and postharvest handling are covered in depth for each crop. This practical and accessible book is an ideal text for horticulture academics, researchers, extension workers, students, breeders, growers and policy makers.

Nutritional Composition of Fruit Cultivars Monique Simmonds, Victor R. Preedy, 2015-10-16 *Nutritional Composition of Fruit Cultivars* provides readers with the latest information on the health-related properties of foods, making the documentation of the nutritive value of historical cultivars especially urgent, especially before they are lost and can't be effectively compared to modern cultivars. Because there is considerable diversity and a substantial body of the compositional studies directed towards commercial varieties, this information is useful for identifying traits and features that may be transposed from one variety to another. In addition, compositional and sensory features may also be used for commercialization and to characterize adulteration. Detailed characterization of cultivars can be used to identify super foods. Alternatively, unmasked historical cultivars may be the focus of reinvigorated commercial practices. Each chapter in this book has sections on the botanical aspects, the composition of traditional or ancient cultivars, the composition of modern cultivars, a focus on areas of research, the specialty of the communicating author of each chapter, and summary points. Presents the botanical aspects and composition of both traditional and modern plants, including in-depth insight into current research and overall summary points for each fruit for consistent comparison and ease of reference. Provides important information in the consideration of preservation, transference or re-introduction of historical traditional cultivars into current crop science. Provides details on compositional and sensory parameters from aroma and taste to micro and macronutrients. Includes data on nutraceuticals and novel components that have proven to impact on or be important in food quality, storage, processing, storage and marketing.

Handbook of Environmental Physiology of Fruit Crops Bruce Schaffer, Peter C. Andersen, 1994-08-19 This exciting handbook is devoted solely to the effects of environmental variables on the physiology of the world's major fruit and nut crops. Its cosmopolitan scope includes chapters on tropical and subtropical species written by scientists from several continents. The influence of environmental factors such as irradiance, temperature, water and salinity on plant physiology and on vegetative and reproductive growth is comprehensively discussed for each crop. In addition to being a thorough textbook, the organization of this volume makes it an excellent reference tool. Each chapter focuses on a single crop or a group of genetically or horticulturally related crops and is appropriately divided into subsections that address individual environmental factors. Some chapters emphasize whole plant physiology and plant growth and

development while other chapters feature theoretical aspects of plant physiology Several chapters provide botanical background discussions to enhance understanding of the crop s response to its environment

Postharvest Physiology and Biochemistry of Fruits and Vegetables Elhadi M. Yahia,Armando Carrillo-Lopez,2018-10-31 Postharvest Physiology and Biochemistry of Fruits and Vegetables presents an updated interrelated and sequenced view of the contribution of fruits and vegetables on human health their aspects of plant metabolism physical and chemical compositional changes during the entire fruit development lifecycle the physiological disorders and biochemical effects of modified controlled atmospheres and the biotechnology of horticultural crops The book is written specifically for those interested in preharvest and postharvest crop science and the impact of physiological and biochemical changes on their roles as functional foods Deals with the developmental aspects of the lifecycle in whole fruits Describes issues such as the morphology and anatomy of fruits beginning with the structural organization of the whole plant and explaining the fruit structure and its botanical classification Addresses biotechnological concepts that control firmness quality and the nutritional value of fruits
