Tropical Dry Forests in the Americas Arturo Sanchez-Azofeifa, Jennifer S. Powers, Geraldo W. Fernandes, Mauricio Quesada, 2013-08-29 Under threat from natural and human disturbance tropical dry forests are the most endangered ecosystem in the tropics yet they rarely receive the scientific or conservation attention they deserve In a comprehensive overview Tropical Dry Forests in the Americas Ecology Conservation and Management examines new approaches for data sampling and

Handbook of Research on the Conservation and Restoration of Tropical Dry Forests Bhadouria, Rahul, Tripathi, Sachchidanand, Srivastava, Pratap, Singh, Pardeep, 2019-09-27 Tropical dry forests are the most exploited and endangered ecosystems in the world A combination of climatic and human factors often reduce these forests to patches of dry scrubs or savannas Because these ecosystems experience a more arduous and less anticipated environment they are more prone to environmental stress as plant communities are developed Therefore urgent research is necessary to understand both the detrimental issues and problem solving approaches to conserving these important forests The Handbook of Research on the Conservation and Restoration of Tropical Dry Forests is a pivotal reference source that combines theory and practice on the current trends and issues in this important ecological subject and discusses future challenges towards conservation strategies of these tropical dry forests While highlighting topics such as forest management natural regeneration and silviculture this publication examines the anthropogenic impacts on tropical dry forests and the necessity to rebuild their ecosystems This book is ideally designed for state forest agency professionals resource managers non governmental organization agents ecologists botanists environmentalists students and researchers seeking current research on the threats to these forests

Tropical dry

forests Reuben Blackie, Cristina Baldauf, Denis Gautier, Davidson Gumbo, Habtemariam Kassa, N. Parthasarathy, Fiona Paumgarten, Phosiso Sola, Sandeep Pulla, Patrick Waeber, Terry Sunderland, 2014-08-01 This discussion paper assesses the state of knowledge on tropical dry forests as it relates to CIFOR's strategy and identifies research opportunities that align with CIFOR's strategic goals. Over the past two decades, CIFOR has accumulated a substantial body of work on dry forests with a particular focus on African dry forests. This paper is intended to build on that work by gathering wider research from around the world as CIFOR seeks to widen the geographic scope of its research on dry forests. The present assessment explores five themes: climate change mitigation and adaptation, food security and livelihoods, demand for energy, sustainable management of dry forests, and policies and institutional support for sustainable management. These themes emerged as priority areas during discussions on dry forest research priorities held at CIFOR's Dry Forests Symposium in South Africa in 2011. Research on these themes should be considered a priority given the importance of dry forests to people and ecosystems around the world and the threats posed to them.

Research Anthology on Ecosystem Conservation and Preserving Biodiversity Management Association, Information Resources, 2022-04-08 In today's rapidly evolving world, it has never been more critical to consider key environmental issues such as climate change, pollution, and endangered species. Society faces an unknown future where the fate of the environment is continuously in flux based on current preservation initiatives that governments develop. In order to ensure the world is protected moving forward, further study on the importance of securing environments, ecosystems, and species is necessary to successfully implement change. The Research Anthology on Ecosystem Conservation and Preserving Biodiversity considers the best practices and strategies for protecting our current ecosystems as well as the potential ramifications of failing to implement policies. Society is at a crossroads where, if we continue to ignore the danger and warning signs brought about by environmental issues, we will be unable to maintain a healthy environment. Covering essential topics such as extinction, climate change, and pollution, this major reference work is ideal for scientists, industry professionals, researchers, academicians, policymakers, scholars, practitioners, instructors, and students.

Chironomidae of Central America Ladislav Hamerlik, Fabio Laurindo da Silva, 2020-11-26 This illustrated introduction to Central American Chironomidae offers extensive photographic material as well as detailed morphological and ecological descriptions of chironomid subfossils found in Central American lake sediments. The book uniquely provides two identification keys: one for living larvae occurring or potentially being present in Central America and one for the recorded subfossil remains using limited morphological characters. Paleolimnological investigations using chironomid remains have undergone a resurgence of interest, and this taxonomic guide will aid the thorough analysis of the diversity and distribution of the taxa encountered to date in Central America. Out of the total 64 described genera, the book brings 20 endemic genera, and more than half of the presented morphotypes are new. Plates are included for each taxon with generic characters and also provide a key to morphotypes if present, their specific characters, distribution, and ecology. Authored by a paleolimnologist and a

taxonomist the guide draws on a thorough taxonomical knowledge of the region's recent chironomid fauna. It uses a paleolimnological approach to transmit this information to morphotypes that can be linked with ecology and used to reconstruct the past development of nature. The book thus helps paleo workers and taxonomists to learn more about these fascinating insects and through them to discover the world around us. Providing a comprehensive reference for aquatic ecologists, paleolimnologists, students and researchers, the guide will also be of interest to non academic professionals working on applied research and biomonitoring of lakes. It will be useful for people studying both recent and subfossil material not only in Central America but in the whole Neotropical region.

Caatinga José Maria Cardoso da Silva, Inara R. Leal, Marcelo Tabarelli, 2018-01-09 This book provides in depth information on Caatinga's geographical boundaries and ecological systems including plants, insects, fishes, amphibians, reptiles, birds and mammals. It also discusses the major threats to the region's socio ecological systems and includes chapters on climate change and fast and large scale land use changes as well as slow and small scale changes also known as chronic human disturbances. Subsequent chapters address sustainable agriculture, conservation systems and sustainable development. Lastly, the book proposes 10 major actions that could enable the transformation of Caatinga into a place where people and nature can thrive together. I consider this book an excellent example of how scientists worldwide can mobilize their efforts to propose sound solutions for one of the biggest challenges of modern times: i.e. how to protect the world's natural ecosystems while improving human well being. I am sure this book will inspire more research and conservation action in the region and perhaps encourage other groups of scientists to produce similar syntheses about their regions.

Costa Rican Ecosystems Maarten Kappelle, 2016-04-15 In the more than thirty years since the publication of Daniel H. Janzen's classic *Costa Rican Natural History*, research in this small but astonishingly biodiverse, well preserved and well studied Latin American nation has evolved from a species level approach to the study of entire ecosystems. And from the lowland dry forests of Guanacaste to the montane cloud forests of Monteverde, from the seasonal forests of the Central Valley to the coastal species assemblages of Tortuguero, Costa Rica has proven to be as richly diverse in ecosystems as it is in species. In *Costa Rican Ecosystems*, Maarten Kappelle brings together a collection of the world's foremost experts on Costa Rican ecology: outstanding scientists such as Daniel H. Janzen, Jorge Cortés, Jorge A. Jiménez, Sally P. Horn, Robert O. Lawton, Quirico Jiménez, M. Carlos Manuel Rodríguez, Catherine M. Pringle and Eduardo Carrillo, among others, to offer the first comprehensive account of the diversity, structure, function, uses and conservation of Costa Rica's ecosystems. Featuring a foreword and introductory remarks by two renowned leaders in biodiversity science and ecological conservation, Thomas E. Lovejoy and Rodrigo Gómez Lobo, in addition to chapters highlighting the geology, soils and climate of Costa Rica as well as the ecosystems of its terrestrial, freshwater and marine habitats, and including previously unpublished information on Isla del Coco, this beautiful color illustrated book will be an essential reference for academic scientists, students, natural history

Semwal, 2019-09-24 The book brings together research topics having a broad focus on human and climate change impacts on the terrestrial ecosystems in the tropics in general and more specifically from the most significant and vulnerable Himalayan ecosystem A total of 16 contributions included in the book cover a diverse range of global change themes such as the impacts of changing temperature and precipitation on soil ecosystems forest degradation extent and impacts of invasive species plant responses to pollution climate change impacts on biodiversity and tree phenology environmental changes associated with land use importance of traditional knowledge in climate change adaptation timberline ecosystems and role of integrated landscape modeling for sustainable management of natural resources The book is a collective endeavour of an international multidisciplinary group of scientists focused on improving our understanding of the impacts of global change on the structure and functioning of tropical ecosystems and addressing the challenges of their future sustainable management We hope that the book will help researchers working in the areas of ecology and environmental science to update their knowledge We also expect that natural resource managers and policy planners will find explanations for some of their observations and hypotheses on multiple global change factors impacting tropical ecosystems and especially Himalayan ecosystems

Tropical Forest Ecosystem Responses to Increasing Nutrient Availability Jürgen Homeier, Selene Báez, Dietrich Hertel, Christoph Leuschner, 2017-09-08 Deforestation and land use change have led to a strong reduction of tropical forest cover during the last decades Climate change will amplify the pressure to the remaining refuges in the next years In addition tropical regions are facing increasing atmospheric inputs of nutrients which will have unknown consequences for the structure and functioning of these systems no matter if they are within protected areas or not Even remote areas are expected to receive rising amounts of nutrients The effects of higher rates of atmospheric nutrient deposition on the biological diversity and ecosystem functioning of tropical ecosystems are poorly understood and our knowledge of nutrient fluxes and nutrient limitation in tropical forest ecosystems is still limited Yet it will be of paramount importance to know the effects of increased nutrient availability to conserve these ecosystems with their biological and functional diversity During the last years research efforts have more and more focused on the understanding of the role of nutrients in tropical ecosystems and several coordinated projects have been established that study the effects of experimental nutrient addition This Research Topic combines results from experiments and from observational studies with the aim to review and conclude on our current knowledge on the role of additional nutrients in ecosystems
