Computer Applications in Near Net-Shape Operations

Andrew Y.C. Nee, Soh K. Ong, Yun G. Wang, 2012-12-06 Having edited Journal of Materials Processing Technology previously entitled Journal of Mechanical Working Technology for close on 25 years I have seen the many dramatic changes that have occurred in the materials processing field. Long gone are the days when the only materials processing carried out was virtually the forming of conventional metals and alloys and when the development of a new product or process in a great number of cases called for several months of repetitive trial and error with many mostly intuition or experience based expensive and time consuming modifications being made to the dies until success was achieved. Even when a successful product was formed its mechanical properties in terms of springback and dimensional accuracy, thickness variations, residual stresses, surface finish etc remained to be determined. Bulk forming operations usually required expensive machining to be carried out on the product to impart the required dimensional accuracy and surface finish. Over the years the experience based craft of metal forming has given way to the science of materials processing. With the use of the computer forming operations can be simulated with accuracy to determine the best forming route and the associated forming loads and die stresses and to predict the mechanical properties of the formed product even down to its surface texture.

Advances in Laser Materials Processing

Jonathan R. Lawrence, 2017-09-20 Advances in Laser Materials Processing Technology: Research and Application, Second Edition provides a revised, updated and expanded overview of the area covering fundamental theory, technology and methods, traditional and emerging applications and potential future directions. The book begins with an overview of the technology and challenges to applying the technology in manufacturing. Parts Two through Seven focus on essential techniques and processes including cutting, welding, annealing, hardening and peening, surface treatments, coating and materials deposition. The final part of the book considers the mathematical modeling and control of laser processes. Throughout, chapters review the scientific theory underpinning applications, offer full appraisals of the processes described and review potential future trends.
