The Coevolution Edward Ashford Lee, 2020-04-21 Should digital technology be viewed as a new life form sharing our ecosystem and coevolving with us Are humans defining technology or is technology defining humans In this book Edward Ashford Lee considers the case that we are less in control of the trajectory of technology than we think It shapes us as much as we shape it and it may be more defensible to think of technology as the result of a Darwinian coevolution than the result of top down intelligent design Richard Dawkins famously said that a chicken is an egg s way of making another egg Is a human a computer s way of making another computer To understand this question requires a deep dive into how evolution works how humans are different from computers and how the way technology develops resembles the emergence of a new life form on our planet Lee presents the case for considering

digital beings to be living then offers counterarguments What we humans do with our minds is more than computation and what digital systems do be teleported at the speed of light backed up and restored may never be possible for humans To believe that we are simply computations he argues is a dataist faith and scientifically indefensible Digital beings depend on humans and humans depend on digital beings More likely than a planetary wipe out of humanity is an ongoing symbiotic coevolution of culture and technology A History of the Atomic Space Age and Its Implications for the Future Willis L. Shirk,2018-02-12 The Atomic Space Age has been and continues to be an engine for future wealth creation Humanity stands on the verge of becoming an interplanetary species We know we are made of star stuff precisely because many of the isotopes in our bodies originated in the death throes of dying suns With the discovery of nuclear fission in 1938 mankind was for the first time able to glimpse both our distant past and our possible future As with the discovery of fire and agriculture thousands of years ago wind power hundreds of years ago and steam power and electricity in the nineteenth century we must now learn to tame this powerful new force locked within the heart of the atom Buckminster Fuller once observed that wealth is nothing more than energy compounded by ingenuity Since mass energy can never decrease and ingenuity will only increase there is no limit to the quantity of wealth that our species can and will create using nuclear space propulsion

The Imagineers of War Sharon Weinberger,2018-02-20 The definitive history of the Defense Advanced Research Projects Agency the Pentagon agency that has quietly shaped war and technology for nearly sixty years Founded in 1958 in response to the launch of Sputnik the agency s original mission was to create the unimagined weapons of the future Over the decades DARPA has been responsible for countless inventions and technologies that extend well beyond military technology Sharon Weinberger gives us a riveting account of DARPA s successes and failures its remarkable innovations and its wild eyed schemes We see how the threat of nuclear Armageddon sparked investment in computer networking leading to the Internet as well as to a proposal to power a missile destroying particle beam by draining the Great Lakes We learn how DARPA was responsible during the Vietnam War for both Agent Orange and the development of the world s first armed drones and how after 9 11 the agency sparked a national controversy over surveillance with its data mining research And we see how DARPA s success with self driving cars was followed by disappointing contributions to the Afghanistan and Iraq wars Weinberger has interviewed more than one hundred former Pentagon officials and scientists involved in DARPA s projects many of whom have never spoken publicly about their work with the agency and pored over countless declassified records from archives around the country documents obtained under the Freedom of Information Act and exclusive materials provided by sources *The Imagineers of War* is a compelling and groundbreaking history in which science technology and politics collide *The Universal Computer* Martin Davis,2018-02-28 The breathtakingly rapid pace of change in computing makes it easy to overlook the pioneers who began it all *The Universal Computer* *The Road from Leibniz to Turing* explores the fascinating lives ideas and discoveries of seven remarkable mathematicians It tells the stories of the unsung heroes of the computer age

the logicians Preparing STEM Teachers Joanne E. Goodell, Selma Koç, 2020-09-01 STEM project based instruction is a pedagogical approach that is gaining popularity across the USA. However, there are very few teacher education programs that focus specifically on preparing graduates to teach in project based environments. This book is focused on the UTeach program, a STEM teacher education model that is being implemented across the USA in 46 universities. Originally focused only on mathematics and science, many UTeach programs are now offering engineering and computer science licensure programs as well. This book provides a forum to disseminate how different institutions have implemented the UTeach model in their local context. Topics discussed will include sustainability features of the model and how program assessment, innovative instructional programming, classroom research, and effectiveness research have contributed to its success. The objectives of the book are: To help educators gain insight into a teacher education organizational model focused on STEM and how and why it was developed; To present the theoretical underpinnings of a STEM education model, i.e. deep learning, conceptual understanding; To present innovative instructional programming in teacher education, i.e. project-based instruction, functions and modeling, research methods; To present research and practice in classroom and field implementation and future research recommendations; To disseminate program assessments and improvement efforts.

The Descent of Artificial Intelligence Kevin Padraic Donnelly, 2024-07-15 The idea that a new technology could challenge human intelligence is as old as the warning from Socrates and Plato that written language eroded memory. With the emergence of generative artificial intelligence programs, we find ourselves once again debating how a new technology might influence human thought and behavior. Researchers, software developers, and visionary tech writers even imagine an AI that will equal or surpass human intelligence, adding to a sense of technological determinism where humanity is inexorably shaped by powerful new machines. But among the hundreds of essays, books, and movies that approach the question of AI, few have asked how exactly scientists and philosophers have codified human thought and behavior. Rather than focusing on technical contributions in machine building, *The Descent of Artificial Intelligence* explores a more diverse cast of thinkers who helped to imagine the very kind of human being that might be challenged by a machine. Kevin Padraic Donnelly argues that what we often think of as the goal of AI has in fact been shaped by forgotten and discredited theories about people and human nature as much as it has been by scientific discoveries, mathematical advances, and novel technologies. By looking at the development of artificial intelligence through the lens of social thought, Donnelly deflates the image of artificial intelligence as a technological monolith and reminds readers that we can control the narratives about ourselves.
