Tropical Forest Ecology The Basis For Conservation And Management Tropical Forestry:

Tropical Forest Ecology Florencia Montagnini, Carl F. Jordan, 2005-03-24 Importance of tropical forests characteristics of tropical forests classification of tropical forests deforestation in the tropics management of tropical forests plantations and agroforestry systems approaches for implementing sustainable management techniques *Human Adaptability* Emilio F. Moran, 2018-05-04 Designed to help students understand the multiple levels at which human populations respond to their surroundings this essential text offers the most complete discussion of environmental physiological behavioral and cultural adaptive strategies available Among the unique features that make *Human Adaptability* outstanding as both a textbook for students and a reference book for professionals are a complete discussion of the development of ecological anthropology and relevant research methods the use of an ecosystem approach with emphasis on arctic high altitude arid land grassland tropical rain forest and urban environments an extensive and updated bibliography on ecological anthropology and a comprehensive glossary of technical terms Entirely new to the third edition are chapters on urban sustainability and methods of spatial analysis with enhanced emphasis throughout on the role of gender in human adaptability research and on global environmental change as it affects particular ecosystems In addition new sections in each chapter guide students to websites that provide access to relevant material complement the text's coverage of biomes and suggest ways to become active in environmental issues **Human Adaptability, Student Economy Edition** Emilio Moran, 2018-10-03 This book focuses on mechanisms of human adaptability It integrates findings from ecology physiology social anthropology and geography around a set of problems or constraints posed by human habitats , **Degraded Forests in Eastern Africa** Frans Bongers, Timm Tennigkeit, 2010 Forest degradation as a result of logging shifting cultivation agriculture and urban development is a major issue throughout the tropics It leads to loss in soil fertility water resources and biodiversity as well as contributes to climate change Efforts are therefore required to try to minimize further degradation and restore tropical forests in a sustainable way This is the first research based book to examine this problem in East Africa The specific focus is on the forests of Ethiopia Tanzania and Uganda but the lessons learned are shown to be applicable to neighbouring countries and others in the tropics A wide range of forest types are covered from dry Miombo forest and afro-montane forests to forest savannah mosaics and wet forest types Current management practices are assessed and examples of good practice presented The role of local people is also emphasized The authors describe improved management and restoration through silviculture plantation forestry and agroforestry leading to improvements in timber production biodiversity conservation and the livelihoods of local people Managing Forest Carbon in a Changing Climate Mark S. Ashton, Mary L. Tyrrell, Deborah Spalding, Bradford Gentry, 2012-01-07 The aim of this book is to provide an accessible overview for advanced students resource professionals such as land managers and policy makers to acquaint themselves with the established science management practices and policies that facilitate sequestration and allow for the storage of carbon in forests The book has

value to the reader to better understand a carbon science and management of forests and wood products b the underlying social mechanisms of deforestation and c the policy options in order to formulate a cohesive strategy for implementing forest carbon projects and ultimately reducing emissions from forest land use

A Critique of Silviculture Klaus J. Puettmann,K. David Coates,Christian C. Messier,2012-09-26 The discipline of silviculture is at a crossroads Silviculturists are under increasing pressure to develop practices that sustain the full function and dynamics of forested ecosystems and maintain ecosystem diversity and resilience while still providing needed wood products A Critique of Silviculture offers a penetrating look at the current state of the field and provides suggestions for its future development The book includes an overview of the historical developments of silvicultural techniques and describes how these developments are best understood in their contemporary philosophical social and ecological contexts It also explains how the traditional strengths of silviculture are becoming limitations as society demands a varied set of benefits from forests and as we learn more about the importance of diversity on ecosystem functions and processes The authors go on to explain how other fields specifically ecology and complexity science have developed in attempts to understand the diversity of nature and the variability and heterogeneity of ecosystems The authors suggest that ideas and approaches from these fields could offer a road map to a new philosophical and practical approach that endorses managing forests as complex adaptive systems A Critique of Silviculture bridges a gap between silviculture and ecology that has long hindered the adoption of new ideas It breaks the mold of disciplinary thinking by directly linking new ideas and findings in ecology and complexity science to the field of silviculture This is a critically important book that is essential reading for anyone involved with forest ecology forestry silviculture or the management of forested ecosystems

Global Resources and the Environment Chadwick Dearing Oliver,Fatma Arf Oliver,2018-05-31 In the past few decades sustainability of natural resources and the social and environmental issues that surround them have become increasingly topical This multidisciplinary book discusses the complex relationships between society natural resources and the environment Major resources including water agriculture energy minerals and forests are considered as well as different facets of the environment including climate landforms and biodiversity Each resource is discussed in the context of both environmental and socio economic factors affecting their present and future distribution and demand Presenting a balanced comprehensive overview of the issues surrounding natural resources and sustainability this accessible volume will be of interest to policy makers resource managers graduate students and researchers in the natural and social sciences

Tropical Forests: Management and Ecology Ariel E. Lugo,Carol Lowe,2012-12-06 Forestry professors used to remind students that whereas physicians bury their mistakes foresters die before theirs are noticed But good institutions live longer than the scientists who contribute to building them and the half century of work of the USDA Forest Service s Institute of Tropical Forestry ITF is in plain view an unprecedented corpus of accomplishments that would instill pride in any organization There is scarcely anyone interested in current issues of tropical forestry who would not benefit from a refresher

course in ITF's findings its early collaboration with farmers to establish plantations its successes in what we now call social forestry its continuous improvement of nursery practices its screening trials of native species its development of wood processing technologies appropriate for developing countries its thorough analysis of tropical forest function and its holistic approach toward conservation of endangered species Fortunately ITF has a long history of information exchange through teaching like many others I got my own start in tropical forest ecology from just such a course in Puerto Rico And long before politicians recognized the global importance of tropical forestry the ITF staff served actively as ambassadors of the discipline visiting tropical countries everywhere to learn and when invited to do so to help solve local problems It is a general principle of biogeography that species turnover rates on islands are higher than those on continents Inevitably the same is true of scientists assigned to work on islands
