with a review of basic differential geometry before moving on to a description of complex manifolds and holomorphic vector bundles Kähler manifolds are discussed from the point of view of Riemannian geometry and Hodge and Dolbeault theories are outlined together with a simple proof of the famous Kähler identities The final part of the text studies several aspects of compact Kähler manifolds the Calabi conjecture Weitzenböck techniques Calabi-Yau manifolds and divisors All sections of the book end with a series of exercises and students and researchers working in the fields of algebraic and differential geometry and theoretical physics will find that the book provides them with a sound understanding of this theory **Rewriting**
