

Problem 1.25 Provide plots for the following functions (over a time span and with a time scale that will appropriately display the shape of the associated waveform):

- (a) $x_1(t) = 100e^{-2t} u(t)$
- (b) $x_2(t) = -10e^{-0.1t} u(t)$
- (c) $x_3(t) = -10e^{-0.1t} u(t-5)$
- (d) $x_4(t) = 10(1 - e^{-100t}) u(t)$
- (e) $x_5(t) = 10e^{-0.2(t-4)} u(t)$
- (f) $x_6(t) = 10e^{-0.2(t-4)} u(t-4)$

Solution:

$$x_2(t-5) = -10e^{-0.1(t-5)} u(t-5) = e^{+0.5} x_3(t)$$

and

$$x_6(t+4) = 10e^{-0.2t} u(t) = e^{-0.8} x_5(t).$$

Singh, 2012-12-06 An integrated approach to environmental data management is necessitated by the complexity of the environmental problems that need to be addressed coupled with the interdisciplinary approach that needs to be adopted to solve them Agenda 21 of the Rio Environmental Conference mandated international programmes and organizations to take steps to develop common data and information management plans and steps have been taken in this direction The key word that defines the framework of the present book is integration The book establishes the basics of integrated approaches and covers environmental data management systems within that framework covering all aspects of data management from objectives and constraints design of data collection networks statistical and physical sampling remote sensing and GIS databases reliability of data data analysis and the transformation of data into information **Physical Fundamentals of Remote Sensing** Erwin Schanda, 2012-12-06 Ten years ago the author together with eight co authors edited a textbook Remote Sensing for Environmental Sciences within the series on Ecological Studies of Springer Verlag At that time there were not yet many books available on remote sensing The decade that has elapsed was marked by a spectacular development in this field This development took place in many directions by widening the areas of application by improvements of the methods and the sensors by the introduction of new versatile platforms but also by deepening the knowledge of the theoretical foundations This evolution improved the ability to explain the interaction between electromagnetic radiation and natural objects which in its turn allowed for better modelization and for the creation of refined mathematical tools in the processing of remotely sensed data and in the determination of the physical status of remote objects The community of research workers engaged in development and use of remote sensing methods changed accordingly from a modest group of scientists in the early 1970 s to a considerable branch of specialized and interdisciplinary activity The training of students had to be adapted to cope with the increasing number of people entering this new field and with the increasing quality of the material to be presented **Manual of Remote Sensing** Robert N.
