Buku ini terdiri dari tiga bab dimana BAB I PENDAHULUAN BAB II RIWAYAT

PERCAMPURAN MAKANAN BAB III SUSU **Proceedings of the 4th Borobudur International Symposium on Science and Technology 2022 (BIS-STE 2022)** Muji Setiyo, Zulfikar Bagus Pambuko, Chrisna Bagus Edhita Praja, Agus Setiawan, Fitriana Yuliasuti, Lintang Muliawanti, Veni Soraya Dewi, 2023-11-08 This is an open access book Related to the big theme of the SDGs reinforcement at our previous conference we try to invite all academics and researchers around the world to participate in the 4th Borobudur International Symposium 2022 4thBIS 2022 As we know the COVID 19 pandemic and its impact on all the 17 SDGs have demonstrated how what began as a health catastrophe swiftly transformed into a human socioeconomic and environmental crisis The 4th BIS brought up The Innovation Chain A Contribution to Society and Industry as the main theme to respond this condition This conference is expected to support the UN Agenda Additionally this conference will also provide avenues for participants to exchange ideas and network with each other as well as domain experts from their fields Overall this event is aimed at professionals across all spheres of technology and engineering including the experienced inexperienced and students as well The conference will be held virtually on Wednesday December 21st 2022 in Magelang Central Java Indonesia **Discovering Play Store Reviews Related to Specific Android App Issues** Angshuman Ghosh, 2018 Mobile App reviews may contain information relevant to developers Developers can investigate these reviews to see what users of their apps are complaining about However the huge volume of incoming

reviews is impractical to analyze manually Existing research that attempts to extract this information suffers from two major issues supervised machine learning methods are usually pre trained and thus does not provide the developers the freedom to define the app issue they are interested in whereas unsupervised methods do not guarantee that a particular app issue topic will be discovered In this thesis we attempt to devise a framework that would allow developers to define topics related to app issues at any time and with minimal effort discover as many reviews related to the issue as possible Scalable Continuous Active Learning S CAL is an algorithm that can be used to quickly train a model to retrieve documents with high recall First we investigate whether S CAL can be used as a tool for training models to retrieve reviews about a specific app issue We also investigate whether a model trained to retrieve reviews about a specific issue for one app can be used to do the same for a separate app facing the same issue We further investigate transfer learning methods to improve retrieval performance for the separate apps Through a series of experiments we show that S CAL can be used to quickly train models that can to retrieve reviews about a particular issue We show that developers can discover relevant information during the process of training the model and that the information discovered is more than the information that can be discovered using keyword search under similar time restrictions Then we show that models trained using S CAL can indeed be reused for retrieving reviews for a separate app and that performing additional training using transfer learning protocols can improve performance for models that performed below expectation Finally we compare the performance of the models trained by S CAL at retrieving reviews for a separate app against that of two state of the art app review analysis methods one of which uses supervised learning while the other uses unsupervised learning We show that at the task of retrieving relevant reviews about a particular topic models trained by S CAL consistently outperform existing state of the art methods [Apps Review Guide for Android](#) , *On The Link Between Mobile App Quality And User Reviews* ,2014 Mobile app stores contain millions of apps which users can download and install on their smart phones Each app has a page in the mobile app store that includes app s description a download link for the app and a space for users to review the app Each review has a 1 5 star rating and a review comment Unlike desktop and server side software where direct user feedback about software quality was difficult to acquire app developers now have access to the user s perspective of their apps via the reviews Since apps with high rating reviews are downloaded statistically significantly more than apps with low rating reviews the insights from studying these reviews are very important Thus in this thesis we analyze hundreds of thousands of reviews of Android and iOS apps to help developers understand the relationship between app quality and the feedback in reviews In this thesis we find that low rated reviews of apps contain 12 different complaint types which have varying impact and frequencies The most frequent complaints are about functional errors feature requests and app crashes complaints about privacy ethical and hidden cost issues receive the worst star ratings For Android developers struggling with device fragmentation we find that different Android devices give varying star ratings However we show that device info from reviews can also be used to

identify a subset of Android devices that should be prioritized for testing Finally we show that warnings from FindBugs a static analysis tool are related to lower average app ratings and the complaints that users leave in the reviews This thesis shows how studying the reviews of mobile apps can help developers prioritize their testing efforts to address the concerns of their users The Rough Guide to the Best Android Apps Rough Guides,2012-08-02 So many apps and so little time How do you get to the best with a minimum of fuss The Rough Guide to the Best Android Apps solves the problem It reveals the 400 best free and paid for applications for smartphones and tablets in all categories Whether its navigation or news photography or productivity games or utilities this book highlights the best Android apps available from the marquee names to the hidden gems Discover now the 400 apps your Android device should be using **Best Android Apps** Mike Hendrickson,Brian Sawyer,2010 JAVA FOR ANDROID, SECOND EDITION (2).
