Ultra Thin Film Characterization Of The Organic Rectifier Project

Katrin Zwirgmaier

Ultra Thin Film Characterization Of The Organic Rectifier Project:

Ultra Thin Film Characterization of the Organic Rectifier Project, 1991 The discovery of superconductivity at high temperatures has generated considerable effort at understanding the physical properties of bismuth and copper oxides. It is important to recognize that these oxides are members of the broad class of perovskite and simple transition metal oxides that usually do not exhibit metallic conductivity and even less often exhibit superconductivity. As part of an overall understanding of high temperature superconductivity it is important to understand the fundamental electronic energies that determine why some oxides are metallic whereas the majority have low conductivity. It is these fundamental energies for the undoped oxide systems that provide the basis for understanding the hole doped systems and lie behind the assumptions of the various theories for high temperature superconductivity. **Scientific and Technical Aerospace Reports**, 1991 *Government Reports Announcements & Index*, 1991-10 **Government reports annual index**, 199? **The Engineering Index Annual**, 1992 Since its creation in 1884 Engineering Index has covered virtually every major engineering innovation from around the world. It serves as the historical record of virtually every major engineering innovation of the 20th century. Recent content is a vital resource for current awareness, new production information, technological forecasting and competitive intelligence. The world's most comprehensive interdisciplinary engineering database Engineering Index contains over 10.7 million records. Each year over 500,000 new abstracts are added from over 5,000 scholarly journals, trade magazines and conference proceedings. Coverage spans over 175 engineering disciplines from over 80 countries. Updated weekly. **Water Resources Research Catalog**, 1968 Beginning with vol. 9 only new and continuing but modified projects are listed. Vols. 8 should be kept as a record of continuing but unchanged projects. *Index to Theses with Abstracts Accepted for Higher Degrees by the Universities of Great Britain and Ireland and the Council for National Academic Awards*, 2008 **Japanese Technical Abstracts**, 1988 Japanese Technical Periodical Index, 1987 **Electrical & Electronics Abstracts**, 1997 **Science Abstracts**, 1995 The GEC Journal of Research, 1996 *International Aerospace Abstracts*, 1997 Researchers, National Laboratories in Japan, 1996 Proceedings of the IRE, Institute of Radio Engineers, 1958 IRE WESCON Convention Record, 1958 Proceedings of the IEEE, Institute of Electrical and Electronics Engineers, 1956 Vols. 34 include section Waves and electrons **Metals Abstracts**, 1999 ERDA Energy Research Abstracts United States.
