Deep Blue
The world watched with considerable amazement in May 1997 as IBM's chess computer, Deep Blue, beat Garry Kasparov, the world champion, in a six-game match. With a machine's victory in this most cerebral of games, it seemed that a line had been crossed, that our measurements of ourselves might need tailoring. The truth of who ultimately won and who lost, of course, is black-and-white. Kasparov played poorly, resigning a game that would have led to a draw early in the match and making a completely uncharacteristic error in the last game. And while chess playing computers have been gaining an edge on their human competitor
