

BOOK REVIEWS: How to write a book review

There are two approaches to book reviewing:

Descriptive reviews give the essential information about a book. This is done with description and exposition, by stating the perceived aims and purposes of the author, and by quoting striking passages from the text.

Critical reviews describe and evaluate the book, in terms of accepted literary and historical standards, and supports this evaluation with evidence from the text. The following pointers are meant to be suggestions for writing a critical review.

Basic requirements

To write a critical review, the reviewer must know two things:

Knowing the work under review: This demands not only attempting to understand the author's purpose and how the component parts of the work contribute to that purpose, but also knowledge of the author: his/her nationality, time period, other works etc.

Requirements of the genre: This means understanding the art form and how it functions. Without such context, the reviewer has no historical or literary standard upon which to base an evaluation.

Reviewing essentials

Description of the book. Sufficient description should be given so that the reader will have some understanding of the author's thoughts. This account is not a summary. It can be woven into the critical remarks.

Discuss the author. Biographical information should be relevant to the subject of the review and enhance the reader's understanding of the work under discussion.

Appraise the book. A review must be a considered judgment that includes:

- a statement of the reviewer's understanding of the author's purpose
- how well the reviewer feels the author's purpose has been achieved
- evidence to support the reviewer's judgement of the author's achievement.

While you read:

- Read the book with care.
- Highlight quotable passages.
- Note your impressions as you read.
- Allow time to assimilate what you read so that the book can be seen in perspective.
- Keep in mind the need for a single impression which must be clear to the reader.

Novel Translational Advances in Hemodynamics for the Diagnosis and Treatment of Cardiovascular Diseases Gaoyang Li,Aike Qiao,Hitomi Anzai ,Xuelan Zhang,2024-11-12 Currently hemodynamically guided diagnosis and treatment of cardiovascular diseases has vastly improved morbidity and mortality However many challenges remain such as the increasing complexity of patients conditions the uneven level of overall treatment the heavy task of medical and nursing staff in treating patients and the accelerated updating and iteration of new technologies in the discipline In clinic settings obtaining direct clinical access of hemodynamic parameters remains challenging mainly due to the potential risks of invasive measurements and expensive medical costs Numerous experimental and simulation methods have been developed to address this deficiency to achieve noninvasive detection of hemodynamics Two commonly utilized techniques are the representative particle image velocimetry PIV and computational fluid dynamics CFD

Cross-Disciplinary Approaches to Characterize Gait and Posture Disturbances in Aging and Related Diseases, volume II Simone Tassani,Claudio Belvedere ,Juan Ramírez,Giorgio Davico,2024-06-06 Aging introduces disturbances to the gait and posture of individuals Such alterations can originate or result from a wide range of causes making it challenging to understand when modifications are related to pathological or physiological causes Many disciplines come together to perform this kind of analysis e g computational and experimental mechanics image processing medicine biology physiology

machine learning and data science Gait analysis is particularly sensitive to the interactions of different disciplines This technique allows the study of human movements but only through a multidisciplinary approach it is possible to infer relations of causation Narrow studies focusing on specific techniques are important to develop the fundamental tools required to study movement In recent years significant methodological advancements have been independently made in these fields However to cross the borders of current science and develop consistent results any new study needs to set interdisciplinary goals An inclusive approach merging multiple aspects would be key in targeting pharmacological or rehabilitation interventions and improving patient care as a whole

Science And Technology In Deep Underground Laboratories Aldo Ianni, Sean M. Paling, Carlos Peña Garay, Jeter Hall, 2024-12-31 Deep Underground Laboratories are multidisciplinary research infrastructures with a rock overburden that goes from a few hundred meters to a few kilometers Presently there are 13 laboratories in operation on three Continents North America Europe Asia Australia for a global excavation volume of order 10⁶ m³ New laboratories are being constructed proposed including a new one in South America The main reason to develop an underground infrastructure is related to operate in a less radioactive environment where in particular muons from cosmic rays are strongly suppressed This low background environment opens the possibility to search for very rare events such as low energy neutrino interactions dark matter direct detection and neutrinoless double beta decay These are crucial studies to enhance our understanding of the Universe In addition these special environments in which these infrastructures are located provide opportunities to carry out many and varied studies on geology geophysics biology and planetary exploration of significant interest and impact in both pure and applied science A number of technological challenges over the last decades have been faced by scientists working in these infrastructures As a consequence state of the art facilities are in operation in Underground Laboratories for radio purity assay ultra low temperature detectors quantum computing radon suppression and mitigation advanced machining and next generation gravitational wave detectors *American Monthly Review of Reviews*
