Trends In Drug Research Iii:

Trends in Drug Research III H. van der Goot, 2002-01-25 The tradition of setting new trends in medicinal chemistry continued at the 13th Symposium where topics included chemical and biological diversity new paradigms in drug action and new insights in receptor mechanisms Other topics of great interest discussed and included in these proceedings are the discoveries in green chemistry the interface between organic synthesis and biosynthesis the growing problem of resistant micro organisms and the possibilities to identify new and better antibiotics And finally in recent developments the discovery of small molecules with insulin sensitizing properties *Trends in Drug Research II* H. van der Goot, 1998-01-16 This volume of Pharmacochimica Acta Library comprises the text of invited lectures presented at the 11th Noordwijkerhout Camerino Symposium Trends in Drug Research held in Noordwijkerhout The Netherlands from 11-15 May 1997 In the programme attention has been given to the generation of new biological target systems and the generation of new lead molecules with presentations on e.g. combinatorial chemistry compound libraries database search high throughput screening and molecular biology Other topics discussed were the perspectives for new medicines for the gastro intestinal tract the major developments in the search for effective anti HIV drugs and new aspects in synthetic approaches In a special session three topics which currently draw much attention were discussed How to deal with the major problem of resistance against antimicrobial agents Can the apoptosis mechanism be used as a drug target Is the newly observed phenomenon of inverse agonism a general principle and has it consequences for drug development and use **Monthly Catalog of United States Government Publications**, 2004 Monthly Catalog of United States Government Publications United States Superintendent of Documents, 1994 Trends and Changes in Drug Research and Development S.R. Walker, 2012-12-06 The 20th Anniversary of a Learned Society is a momentous event in its affairs and it is fitting that in the Appendix to the Proceedings of the 20th Anniversary Meeting the history of the Society for Drug Research is outlined The aim of the Society to encourage an interdisciplinary approach and to act as an organisation freed from any specific scientific branch of knowledge was achieved and is exemplified by the publication of these proceedings of the Anniversary Meeting held at the Pharmaceutical Society of Great Britain In only two other cases have the Society's proceedings been published maintaining the original decision and policy to allow membership to enjoy communications from those who may not have agreed to speak had publication been mandatory The papers presented at the Anniversary Meeting covered a wide range of scientific disciplines and it is fitting that work of such calibre should have been published under the able editorship of Stuart and Bryan Walker They should prove invaluable to those who are interested in Drug Research **Annual Reports in Computational Chemistry** David Spellmeyer, 2005-04-12 Annual Reports in Computational Chemistry is a new periodical providing timely and critical reviews of important topics in computational chemistry as applied to all chemical disciplines Topics covered include quantum chemistry molecular mechanics force fields chemical education and applications in

academic and industrial settings Each volume is organized into thematic sections with contributions written by experts Focusing on the most recent literature and advances in the field each article covers a specific topic of importance to computational chemists Annual Reports in Computational Chemistry is a must for researchers and students wishing to stay up to date on current developments in computational chemistry Broad coverage of computational chemistry and up to date information The topics covered include quantum chemistry molecular mechanics force fields chemical education and applications in academic and industrial settings Each chapter reviews the most recent literature on a specific topic of interest to computational chemists *Current Catalog* National Library of Medicine (U.S.),1993-04 *The Histamine H3 Receptor* R. Leurs,H. Timmerman,1998-12-09 In the early eighties when the H3 receptor was identified many thought that an H3 ligand an agonist or an antagonist would become available as a therapeutic agent This has not occurred The reason for this could be the fact that many investigators consider histamine mainly if not only as a mediator present in for example mast cells being released during allergic events However it has become apparent that histamine is an important neurotransmitter Its role in the nervous system especially in the central part of it is rather extensive The H3 receptor is mainly found as a presynaptic one both on histaminergic neurons the auto type and on other neuronal systems the hetero type Both the H3 agonist and the H3 antagonist cause important pharmacological effects Several ligands have become available now including radiolabelled analogues In this book the current state of affairs with regards to the medicinal chemistry and pharmacology of the H3 receptor and the several ligands available are presented by a number of experts in the field The book presents an extended review of what has happened since the first H3 paper appeared The editors hope that publication of this work will lead to an increase in interest of both academia and industry for the H3 receptor especially as a target for drug development

Monthly Catalogue, United States Public Documents ,1994-08 Receptor Chemistry Towards the Third Millennium M. Gianella,G. Marucci,W. Quaglia,U. Gulini,2000-05-31 Receptor Chemistry Towards the Third Millennium is the result of papers presented at the 12th Camerino Noordwijkerhout Symposium held in Camerino Italy in September 1999 Although much is known about the way ligands interact with receptors which have now been isolated characterized and cloned many aspects still remain to be explored In particular differentiation into distinct subpopulations and the multiplicity of transduction processes offer more specific targets in the search for new drugs This book will be of interest to medicinal chemists pharmacologists biochemists and neurologists and will also be a valuable source of reference for medical students and postgraduate students in related fields
