Ultimate Horizons Probing The Limits Of The Universe The Frontiers Collection:

Ultimate Horizons Helmut Satz, 2014-02-04 In the last hundred years modern physics and cosmology have shown that there exist regions of the universe forever beyond our reach hidden by truly ultimate horizons Such regions exist in those remote parts of the universe where from our point of view space expands faster than the speed of light They are found in black holes where the gravity is strong enough to retain even light within its field of attraction And in the realm of the very small quarks must remain forever confined to their world of extreme density and can never be removed from it The aim of this book is to describe these ultimate horizons how they were discovered how they shape our view of the world and what clues we have about a world beyond them

The Reality of Time Flow Richard T. W. Arthur, 2019-04-25 It is commonly held that there is no place for the now in physics and also that the passing of time is something subjective having to do with the way reality is experienced but not with the way reality is Indeed the majority of modern theoretical physicists and philosophers of physics contend that the passing of time is incompatible with modern physical theory and excluded in a fundamental description of physical reality This book provides a forceful rebuttal of such claims In successive chapters the author explains the historical precedents of the modern opposition to time flow giving careful expositions of matters relevant to becoming in classical physics the special and general theories of relativity and quantum theory without presupposing prior expertise in these subjects Analysing the arguments of thinkers ranging from Aristotle Russell and Bergson to the proponents of quantum gravity he contends that the passage of time understood as a local becoming of events out of those in their past at varying rates is not only compatible with the theories of modern physics but implicit in them

The Seneca Effect Ugo Bardi, 2017-08-22 The essence of this book can be found in a line written by the ancient Roman Stoic Philosopher Lucius Annaeus Seneca Fortune is of sluggish growth but ruin is rapid This sentence summarizes the features of the phenomenon that we call collapse which is typically sudden and often unexpected like the proverbial house of cards But why are such collapses so common and what generates them Several books have been published on the subject including the well known Collapse by Jared Diamond 2005 The collapse of complex societies by Joseph Tainter 1998 and The Tipping Point by Malcom Gladwell 2000 Why The Seneca Effect This book is an ambitious attempt to pull these various strands together by describing collapse from a multi disciplinary viewpoint The reader will discover how collapse is a collective phenomenon that occurs in what we call today complex systems with a special emphasis on system dynamics and the concept of feedback From this foundation Bardi applies the theory to real world systems from the mechanics of fracture and the collapse of large structures to financial collapses famines and population collapses the fall of entire civilizations and the most dreadful collapse we can imagine that of the planetary ecosystem generated by overexploitation and climate change The final objective of the book is to describe a conclusion that the ancient stoic philosophers had already discovered long ago but that modern system science has rediscovered today If you want to avoid collapse you need to embrace change not fight it Neither a book about doom and

gloom nor a cornucopianist's dream The Seneca Effect goes to the heart of the challenges that we are facing today helping us to manage our future rather than be managed by it **CERN Courier**,2014 The Fundamentals of Modern Astrophysics Mikhail Ya Marov,2014-11-11 The Fundamentals of Modern Astrophysics provides an overview of the modern science of astrophysics It covers the Sun Solar System bodies exoplanets stars and star life cycle planetary systems origin and evolution basics of astrobiology our galaxy the Milky Way other galaxies and galactic clusters a general view of the Universe its structure evolution and fate modern views and advanced models of cosmology as well as the synergy of micro and macro physics standard model superstring theory multiversality and worm holes The main concepts of modern astrophysics and prospects for future studies are accompanied by numerous illustrations and a summary of the advanced projects at various astronomical facilities and space missions Dr Marov guides readers through a maze of complicated topics to demystify the field and open its wonders to all The Mind of Whitehead Roland Faber,2024-05-30 For Alfred North Whitehead the fundamental basis of reality is connectivity the possibility interdependence and actualisation that defy our human desire for structure categorisation and division In this spirit Professor Roland Faber combines the disparate interests of Whitehead's study from Mathematics to Divinity Political Philosophy to Cosmology to trace the thematic similarities of this work and establish their unity in the mind of Whitehead Focussing on the experience of reading Whitehead's rich text Faber invites the reader not to search for fixed patterns but to explore the impermanence and diversity of Whitehead's ideas The Mind of Whitehead offers the curious reader a creative exploration of a crucial twentieth century philosopher speaking to global concerns from a position of possibility and complexity **Edge of Existence** ZOE D.
