UML 2 For Dummies Michael Jesse Chonoles, James A. Schardt, 2011-04-27 Uses friendly easy to understand For Dummies style to help readers learn to model systems with the latest version of UML the modeling language used by companies throughout the world to develop blueprints for complex computer systems Guides programmers architects and business analysts through applying UML to design large complex enterprise applications that enable scalability security and robust execution Illustrates concepts with mini cases from different business domains and provides practical advice and examples Covers critical topics for users of UML including object modeling case modeling advanced dynamic and functional modeling and component and deployment modeling Communicating Systems with UML 2 David Garduno Barrera, Michel Diaz, 2013-02-07 This book gives a practical approach to modeling and analyzing communication protocols using UML 2 Network protocols are always presented with a point of view focusing on partial mechanisms and starting models This book aims at giving the basis needed for anybody to model and validate their own protocols It follows a practical approach and gives many examples for the description and analysis of well known basic network mechanisms for protocols The book firstly shows how to describe and validate the main protocol issues such as synchronization problems client server interactions layer organization and behavior etc in an easy and understandable way To do so the book considers and presents the main traditional network examples e g unidirectional flows full duplex communication error recovering alternating bit Finally it presents the outputs resulting from a few simulations of these UML models Other books usually only focus either on teaching UML or on analyzing network protocols however this book will allow readers to model network protocols using a new perspective and integrating these two views so facilitating their comprehension and development Any university student studying in the field of computing science or those working in telecommunications embedded systems or networking will find this book a very useful addition **Advanced Intelligent Computing Theories and Applications** De-Shuang Huang, Zhongming Zhao, Vitoantonio Bevilacqua, Juan Carlos Figueroa, 2010-07-30 This book constitutes the refereed proceedings of the 6th International Conference on Intelligent Computing ICIC 2010 held in Changsha China in August 2010 The 85 revised full papers presented were carefully reviewed and selected from a numerous submissions The papers are organized in topical sections on neural networks evolutionary learning genetic algorithms fuzzy theory and models fuzzy systems and soft computing particle swarm optimization and niche technology supervised semi supervised learning unsupervised reinforcement learning combinatorial numerical optimization systems biology and computational biology neural computing and optimization nature inspired computing and optimization knowledge discovery and data mining artificial life and artificial immune systems intelligent computing in image processing special session on new hand based biometric methods special session on recent advances in image segmentation special session on theories and applications in advanced intelligent computing special session on search based software engineering special session on bio inspired computing and

Reussner, 2008-10-10 Models are used in all kinds of engineering disciplines to abstract from the various details of the modelled entity in order to focus on a specific aspect Like a blueprint in civil engineering a software architecture provides an abstraction from the full software system's complexity It allows software designers to get an overview on the system under development and to analyze its properties In this sense models are the foundation needed for software development to become a true engineering discipline Especially when reasoning on a software system's extra functional properties its software architecture carries the necessary information for early design time analyses These analyses take the software architecture as input and can be used to direct the design process by allowing a systematic evaluation of different design alternatives For example they can be used to cancel out decisions which would lead to architecture signs whose implementation would not comply with extra functional requirements like performance or reliability constraints Besides such quality attributes directly visible to the end user internal quality attributes e.g. maintainability also highly depend on the system's architecture In addition to the above mentioned technical aspects of software architecture models non technical aspects especially project management related activities require an explicit software architecture model The models are used as input for cost estimations time deadline and resource planning for the development teams They serve the project management activities of planning executing and controlling which are necessary to deliver high quality software systems in

Model Driven Engineering Languages and Systems Andy Schürr, Bran Selic, 2009-09-15 The pioneering organizers of the first UML workshop in Mulhouse France in the summer of 1998 could hardly have anticipated that in little over a decade their initiative would blossom into today's highly successful MODELS conference series the premier annual gathering of researchers and practitioners focusing on a very important new technical discipline model based software and system engineering This expansion is of course a direct consequence of the growing significance and success of model based methods in practice The conferences have contributed greatly to the heightened interest in the field attracting much young talent and leading to the gradual emergence of its corresponding scientific and engineering foundations The proceedings from the MODELS conferences are one of the primary references for anyone interested in a more substantive study of the domain The 12th conference took place in Denver in the USA October 4-9 2009 along with numerous satellite workshops and tutorials as well as several other related scientific gatherings The conference was exceptionally fortunate to have three eminent invited keynote speakers from industry Stephen Mellor Larry Constantine and Grady Booch
