Sustainable Production: Novel Trends in Energy, Environment and Material Systems Grzegorz M. Królczyk, Małgorzata Wzorek, Anna Król, Orest Kochan, Jun Su, Janusz Kacprzyk, 2019-01-24 This book highlights recent research on sustainable production. In today's manufacturing industry, cleaner production has become a central goal. Sustainable production describes activities that pose no threat to future generations and are not pursued at their expense. In addition, sustainable production is a concept that can improve environmental performance and focuses on technical aspects that can be used to improve efficiency and productivity. Sustainable production is not limited to the manufacturing sector but affects all production sectors including energy, environment and material systems, all of which face significant challenges in connection with sustainability, e.g. efforts to reduce production's impact on the environment and to manage health and safety impacts. Key means of reducing environmental pollution from manufacturing involve reducing the main resources used in production: metals used in the machining processes, fluids, oils, in production, water and energy.

Aerospace Alloys Stefano Gialanella, Alessio Malandrucolo, 2019-10-30 This book presents an up-to-date overview on the main classes of metallic materials currently used in aeronautical structures and propulsion engines and discusses other materials of potential interest for structural aerospace applications. The coverage encompasses light alloys such as aluminum, magnesium and titanium-based alloys including titanium aluminides, steels, superalloys, oxide dispersion strengthened alloys, refractory alloys and related systems such as laminate composites. In each chapter, materials properties and relevant technological aspects including processing are presented. Individual chapters focus on coatings for gas turbine engines and hot corrosion of alloys and coatings. Readers will also find consideration of applications in aerospace-related fields. The book takes full account of the impact of energy saving and environmental issues on materials development, reflecting the major shifts that have occurred in the motivations guiding research efforts into the development of new materials systems. *Aerospace Alloys* will be a valuable reference for graduate students on materials science and engineering courses and will also provide useful information for engineers working in the aerospace, metallurgical and energy production industries.
