A boy finishes his drink and tosses it in the trash, straw and all. He moves on without another thought. In the waters off of Costa Rica, scientists spot an endangered sea turtle and pull him aboard to study him. But he has something stuck in his nose: A barnacle. A stick. No, it's a plastic straw. The ^AEssential Child Susan A. Gelman, 2005-04-21 Numerous fields stake claims about essentialism but this is the first book to address the issues surrounding essentialism from the perspective of developmental psychology. Gelman synthesizes 15 years of empirical research on essentialism into a coherent framework examining children's thinking and ways in which language influences thought. She argues that young children's use of concepts such as dog man or intelligence reflects their deep commitment to the presence of these categories, properties that extends beyond the observable information about objects. The presence of this commitment in children also means that they do not come into the world as passive recipients of data but rather have an organizational scheme that supports categories. This volume will be of interest to developmental cognitive and social psychologists as well as to scholars in cognitive science and philosophy.
