DHC-6 Twin Otter, Series 100 Flight Manual De Havilland Aircraft of Canada, Limited, 1968 A Flight-test and Simulation Evaluation of the Longitudinal Final Approach and Landing Performance of an Automatic System for a Light Wing Loading STOL Aircraft Equipped with Wing Spoilers Stuart Crockett Brown, 1984 As part of a comprehensive flight test investigation of short takeoff and landing STOL operating systems for the terminal systems for the terminal area an automatic landing system has been developed and evaluated for a light wing loading turboprop powered aircraft An advanced digital avionics system performed display navigation guidance and control functions for the test aircraft Control signals were generated in order to command powered actuators for all conventional controls and for a set of symmetrically driven wing spoilers This report describes effects of the spoiler control on longitudinal Autoland automatic landing performance Flight test results with and without spoiler control are presented and compared with available basically conventional takeoff and landing performance criteria These comparisons are augmented by results from a comprehensive simulation of the controlled aircraft that included representations of the microwave landing system navigation errors that were encountered in flight as well as expected variations in atmospheric turbulence and wind shear Flight test results show that the addition of spoiler control improves the touchdown performance of the automatic landing system Spoilers improve longitudinal touchdown and landing pitch attitude performance particularly in tailwind conditions Furthermore simulation results indicate that performance would probably be satisfactory for a wider range of atmospheric disturbances than those encountered in flight Flight results also indicate that the addition of spoiler control during the final approach does not result in any measurable change in glidepath track performance and results in a very small deterioration in airspeed tracking This difference contrasts with simulations results which indicate some improvement in glidepath tracking and no appreciable change in airspeed tracking The modeling problem in the simulation that contributed to this discrepancy with flight was not resolved **NASA Technical Memorandum** ,1984 **Scientific and Technical Aerospace Reports** ,1992
