This book is intended to fill a gap between the theoretical studies and the practical experience of the processor in the extrusion of thermoplastic polymers. The former have provided a basis for numerical design of extruders and their components but generally give scant attention to the practical performance, especially to the conflict between production rate and product quality. In practice, extruders are frequently purchased to perform a range of duties, even so the operator may have to use a machine designed for another purpose and not necessarily suitable for the polymer process or product in hand. The operator's experience enables him to make good product in unpromising circumstances, but a large number of variables and interactions often give apparently contradictory results. The hope is that this book will provide a logical background based on both theory and experience which will help the industrial processor to obtain the best performance from his equipment, to recognize its limitations, and to face new problems with confidence. Mathematics is used only to the extent that it clarifies effects which cannot easily be expressed in words; if it is passed over at least a qualitative understanding should remain. The approximate theory will not satisfy the purist, but this seems to the authors less important than a clear representation of the physical mechanisms on which so much of the polymer processing industry depends. Extrusion Cooking R. Guy, 2001-06-25. Extrusion cooking is an ideal method for manufacturing a number of food products from snacks and breakfast cereals to baby foods. However, as a complex multivariate process, it requires careful control if product quality is to be maintained. Edited by a leading authority in the field and with an international team of contributors, this important collection reviews the key factors affecting quality and how they can be controlled in manufacturing a range of extruded products. The first part of *Extrusion Cooking* looks at general influences on quality. There are chapters on the selection of raw materials, criteria for selecting the right extruder, analysing and optimising thermal performance in extrusion cooking, and effective process control. There is also an important chapter on maintaining nutritional quality in extruded products. The second part of the book looks at the application of extrusion in particular product groups. Each chapter examines the range of extruded products within the product group, the specific production issues, and future trends. It also includes chapters on key products such as breakfast cereals, snack foods, and baby foods. Extrusion cooking will

be widely welcomed as a major reference in maximising the quality of extruded products A key reference to improving efficiency and quality on extruded products
