Using Design Research and History to Tackle a Fundamental Problem with School Algebra Sinan Kanbir,M. A. (Ken) Clements,Nerida F. Ellerton,2017-10-28 In this well illustrated book the authors Sinan Kanbir Ken Clements and Nerida Ellerton tackle a persistent and universal problem in school mathematics why do so many middle school and secondary school students find it difficult to learn algebra well What makes the book important are the unique features which comprise the design research approach that the authors adopted in seeking a solution to the problem The first unique feature is that the authors offer an overview of the history of school algebra Despite the fact that algebra has been an important component of secondary school mathematics for more than three centuries there has never been a comprehensive historical analysis of factors influencing the teaching and learning of that component The authors identify through historical analysis six purposes of school algebra a algebra as a body of knowledge essential to higher mathematical and scientific studies b algebra as generalized arithmetic c algebra as a prerequisite for entry to higher studies d algebra as offering a language and set of procedures for modeling real life problems e algebra as an aid to describing structural properties in elementary mathematics and f algebra as a study of variables They also raise the question whether school algebra represents a unidimensional trait Kanbir Clements and Ellerton offer an unusual hybrid theoretical framework for their intervention study by which seventh grade students significantly improved their elementary algebra knowledge and skills Their theoretical frame combined Charles Sanders Peirce s triadic signifier interpretant signified theory which is in the realm of semiotics with Johann Friedrich Herbart s theory of apperception and Ken Clements and Gina Del Campo s theory relating to the need to expand modes of communications in mathematics classrooms so that students engage in receptive and expressive modes Practicing classroom teachers formed part of the research team This book appears in Springer s series on the History of Mathematics Education Not only does it include an important analysis of the history of school algebra but it also adopts a theoretical frame which relies more on theories from the past than on contemporary theories in the field of mathematics education The results of the well designed classroom intervention are sufficiently impressive that the study might have created and illuminated a pathway for future researchers to take *Quantitative Measures of Mathematical Knowledge* Jonathan Bostic,Erin Krupa,Jeffrey Shih,2019-04-29 The aim of this book is to explore measures of mathematics knowledge spanning K 16 grade levels By focusing solely on mathematics content such as knowledge of mathematical practices knowledge of ratio and proportions and knowledge of abstract algebra this volume offers detailed discussions of specific instruments and tools meant for measuring student learning Written for assessment scholars and students both in mathematics education and across educational contexts this book presents innovative research and perspectives on quantitative measures including their associated purpose statements and validity arguments **Where's the Math?** Stephanie Lessman,2004 *What Works* Carol Stoel,Wendy Togneri,Patricia R. Hochschild,Nathan Scovronick,Nathan B. Scovronick,2004-10-21 Examines desegregation school funding testing vouchers bilingual education multicultural education and ability grouping These seem to be separate problems but much of the contention over them comes down to the same thing an apparent conflict between policies designed to promote each student s ability to pursue success and those designed to insure the good of all students or the nation as a whole The authors show how polices to promote individual success too often benefit only those already privileged by race or class The book also examines issues such as creationism and afrocentrism *Changing Policies to Close the Achievement Gap* Cynthia D. Prince,2004-04-30 Closing the academic achievement gap is one of the most complex challenges that school system leaders face Closing the gap

became even more urgent with the enactment of the No Child Left Behind Act For the first time the federal government has set a deadline for closing the gap requiring schools to bring all students to proficient levels of academic performance in twelve years How much of the achievement gap can be attributed to what school districts themselves may be doing What factors and conditions impede progress toward closing the achievement gap And what can superintendents do to narrow as much of the gap as they can These questions led to the development of this guide In Changing Policies to Close the Achievement Gap Cynthia Prince identifies state and local policies that tend to make the achievement gap worse and describes policy changes that superintendents have made with the support of their boards to help narrow the gap She also examines policies that aggravate the inequitable distribution of quality teachers and principals that restrict student access to challenging coursework and that reduce academic instruction time Prince argues that closing the gap will require serious efforts to change these policies and other conditions that impede the ability of school districts to bring all students to high levels of performance
