Sustainable Urban Transitions Zaheer Allam, 2023-07-18 This book aims to explore how sustainability transitions can be explored in current and future cities and how research and policy approaches can be applied to change urban life as we know it hence aligning the two thematic of urban science and future science for achieving deep decarbonization On this the discourse on philosophy ethics and morality appertaining to sustainable cities and urban transitions across disciplines are also welcomed as it provides a deeper understanding of humanity in future scenarios Chapter 08 is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com

Explorations in Urban and Regional Dynamics Joel Dearden, Alan Wilson, 2015-03-27 The task of modelling the evolution of cities the dynamics is one of the major challenges of the social sciences This book presents mathematical and computer models of urban and regional dynamics and shows how advances in computer visualisation provide new insights Models of non linear systems in general have three characteristics multiple equilibria path dependence over time and phase transitions that is abrupt change at critical parameter values These phenomena all exhibit themselves in reality and it is an ongoing task to match model based analysis with real phenomena There are three key features of cities and regions to be represented in models activities at a location residence health education work and shopping flows between locations spatial interaction and the structures that carry these activities buildings transport and communications networks Spatial interaction and many elements of activities location can be modelled by statistical averaging procedures which are related to Boltzmann's methods in statistical mechanics This is while the evolution of structure can be represented in equations that connect to the Lotka Volterra equations in ecology Within this broad framework alternative approaches can be brought to bear This book uses entropy maximising versions of spatial interaction models The authors explore the dynamics in more detail using advanced

visualisation techniques These ideas have wide potential uses and the book illustrates this with applications in history and archaeology

Chicago John F. McDonald, 2015-08-14 Chicago went from nothing in 1830 to become the second largest city in the nation in 1900 while the Midwest developed to become one of the world's foremost urban areas This book is an economic history of the Chicago metropolitan area from the 1820s to the present It examines the city in its Midwestern region and compares it to the other major cities of the North This book uses theories of the economics of location and other economic models to explain much of Chicago's history Chicago maintained its status as the second largest city through the first decades of the 20th century but rapid growth shifted to the Sunbelt following World War II Since the 1950s the city's history can be divided into four distinct periods growth with suburbanization 1950 1970 absence of growth continued suburbanization and central city crisis 1970 1990 rebound in the 1990s and financial crisis and deep recession after 2000 Through it all Chicago has maintained its position as the economic capital of the Midwest The book is a synthesis of available literature and public data and stands as an example of using economics to understand much of the history of Chicago This book is intended for the college classroom urban scholars and for those interested in the history of one of world's foremost urban areas
