[Managing Water Under Uncertainty and Risk: United Nations World Water Development Report #4 \(3 Vols.\)](#) UNESCO, 2012-01-01 Released every three years since March 2003 the United Nations World Water Development Report WWDR a flagship UN Water report published by UNESCO has become the voice of the United Nations system in terms of the state use and management of the world's freshwater resources The report is primarily targeted at national decision makers

and water resource managers but is also aimed at educating and informing a broader audience from governments to the private sector and civil society. It underlines the important roles water plays in all social, economic and environmental decisions, highlighting policy implications across various sectors from local and municipal to regional and international levels. Similarly to the first two editions, this report includes a comprehensive and up-to-date assessment of several key challenge areas such as water for food, energy and human health, and governance challenges such as institutional reform, knowledge and capacity building, and financing, each produced by individual UN agencies.

Water and Sanitation Services Jose Esteban Castro, Leo Heller, 2012-05-04. Substantially reducing the number of human beings who lack access to clean water and safe sanitation is one of the key Millennium Development Goals. This book argues and demonstrates that this can only be achieved by a better integration of the technical and social science approaches in the search for improved organization and delivery of these essential services. It presents a historical analysis of the development of water and sanitation services in both developed and developing countries, which provides valuable lessons for overcoming the obstacles facing the universalization of these services. Among the key lessons emerging from the historical analysis are the organizational and institutional diversity characterizing the development of water and sanitation internationally and the central role played by the public sector, particularly local authorities, in such development. It also explores the historical role played by cooperatives and other non-profit institutions in reaching rural and peri-urban areas, as well as the emergence of new forms of organization and provision, particularly in poor countries where aid and development agencies have been promoting the self-organization of water systems by local communities. The book provides a critical exploration of these different institutional options, including the interaction between the public and private sectors and the irreplaceable role of public funding as a condition for success. The book is divided into two parts: the first reviews theoretical and conceptual issues such as the political economy of water services, financing, the interfaces between water and sanitation services and public health, and the systemic conditions that influence the provision of these services, including the diversity of organizational and institutional options characterizing the governance and management of water and sanitation services. The second section presents a number of country or regional case studies, each one chosen to highlight a particular problem, approach or strategy. These case studies are drawn from Africa, the Americas, Asia and Europe, covering a wide range of socio-economic and political contexts. The book will be of great interest to advanced students, researchers, professionals and NGOs in many disciplines, including public policy and planning, environmental sciences, environmental sociology, history of technology, civil and environmental engineering, public health and development studies.
