Twentieth Century Building Materials History And Conservation:

Twentieth-Century Building Materials Thomas C. Jester, 2014-08-01 Over the concluding decades of the twentieth century the historic preservation community increasingly turned its attention to modern buildings including bungalows from the 1930s gas stations and diners from the 1940s and office buildings and architectural homes from the 1950s Conservation efforts however were often hampered by a lack of technical information about the products used in these structures and to fill this gap *Twentieth Century Building Materials* was developed by the U S Department of the Interior s National Park Service and first published in 1995 Now this invaluable guide is being reissued with a new preface by the book s original editor With more than 250 illustrations including a full color photographic essay the volume remains an indispensable reference on the history and conservation of modern building materials Thirty seven essays written by leading experts offer insights into the history manufacturing processes and uses of a wide range of materials including glass block aluminum plywood linoleum and gypsum board Readers will also learn about how these materials perform over time and discover valuable conservation and repair techniques Bibliographies and sources for further research complete the volume The book is intended for a wide range of conservation professionals including architects engineers conservators and material scientists engaged in the conservation of modern buildings as well as scholars in related disciplines *Twentieth-century Building*

Materials Thomas C. Jester, 1995 *Structure and Style* Michael Stratton, 1997 This book looks at approaches to appraising and conserving mainstream architecture of the 20th century commercial buildings industrial buildings and housing

Catalog of Historic Preservation Publications , 1995 *CRM* , 1995 **CRM Bulletin** United States. National Park Service. Cultural Resources Management Division, 1994 *The Ecologies of the Building Envelope* Alejandro Zaera-Polo, Jeffrey Anderson, 2021-05-11 *The Ecologies of the Envelope* theorizes the building envelope as a literal embodiment of the social political technological and economic contingencies which have become embedded within it over the last century analyzing the historical lineages heroes and villains that helped define the complex material ecologies we see within the envelope today While the facade is one of the most thoroughly theorized elements of architecture it is also one of the most questioned since the end of the 19th century Within the discipline of architecture the traditional understanding of the facade focuses primarily on semiotic and compositional operations such as proportional laws and linguistic codes which are deployed on the building s surface In contrast to this our material and environmental theory of the envelope proposes that the exponential development of building technologies since the mid 19th century coupled with new techniques of management and regulation have diminished the compositional and ornamental capacities of the envelope in favor of material quantitative and technical performances Rather than producing a stylistic analysis of the facade we investigate the historical lineages of the performances components assembly types and material entanglements that constitute the contemporary building envelope *A Building History of Northern New England* James L. Garvin, 2002-05 The first and only

full scale technical and stylistic analysis of 200 years of architectural evolution in northern New England Historic Preservation Technology Robert A. Young, 2008-03-21 This introduction to historic preservation goes well beyond the Secretary of the Interior's Standards for Rehabilitation and shows how wood stone masonry and metal were used in the past and how adaptive re use can be employed to bring modern amenities to historic structures The book covers all aspects of the exterior and interior building fabric including windows roofing doors porches and electrical and mechanical systems for both residential and small scale commercial buildings Richly illustrated with photographs showing typical elements of historic buildings decay mechanisms and remediation techniques the book also contains a variety of useful case studies and features a companion Website that offers dozens of additional images and resources *The Architecture of Modern American Synagogues, 1950s-1960s* Anat Geva, 2023-12-14 In the aftermath of World War II the United States experienced a rapid expansion of church and synagogue construction as part of a larger religious boom The synagogues built in that era illustrate how their designs pushed the envelope in aesthetics and construction The design of the synagogues departed from traditional concepts embraced modernism and innovations in building technology and evolved beyond the formal rational style of early 1950s modern architecture to more of an expressionistic design The latter resulted in abstraction of architectural forms and details and the inclusion of Jewish art in the new synagogues *The Architecture of Modern American Synagogues 1950s 1960s* introduces an architectural analysis of selected modern American synagogues and reveals how they express American Jewry's resilience in continuing their physical and spiritual identity while embracing modernism American values and landscape In addition the book contributes to the discourse on preserving the recent past e g mid 20th century architecture While most of the investigations on that topic deal with the brick mortar challenges this book introduces preservation issues as a function of changes in demographics in faith rituals in building codes and in energy conservation As an introduction or a reexamination *The Architecture of Modern American Synagogues 1950s 1960s* offers a fresh perspective on an important moment in American Jewish society and culture as reflected in their houses of worship and adds to the literature on modern American sacred architecture The book may appeal to Jewish congregations architects preservationists scholars and students in fields of studies such as architectural design sacred architecture American modern architecture and building technology Post WWII religious and Jewish studies and preservation and conservation Construction Matters Stefan Holzer, Silke Langenberg, Clemens Knobling, Orkun Kasap, 2025-03-04 Construction History Construction Heritage Recent Construction Historiography Industrialization Engineering Sciences Building Materials Building Actors Construction History is still a fairly new and small but quickly evolving field The current trends in Construction History are well reflected in the papers of the present conference Construction History has strong roots in the historiography of the 19th century and the evolution of industrialization but the focus of our research field has meanwhile shifted notably to include more recent and also more distant histories as well This is reflected in these conference proceedings where 65 out of 148 contributed papers deal with

the built heritage or building actors of the 20th or 21st century The conference also mirrors the wide spectrum of documentary and analytical approaches comprised within the discipline of Construction History Papers dealing with the technical and functional analysis of specific buildings or building types are complemented by other studies focusing on the lives and formation of building actors from laborers to architects and engineers from economical aspects to social and political implications on legal aspects and the strong ties between the history of construction and the history of engineering sciences The conference integrates perfectly into the daily work at the Institute for Preservation and Construction History at ETH Zurich Its two chairs the Chair for Building Archaeology and Construction History and the Chair for Construction Heritage and Preservation endeavor to cover the entire field and to bridge the gaps between the different approaches methodologies and disciplines between various centuries as well as technologies learning together and from each other The proceedings of 8ICCH give a representative picture of the state of the art in the field and will serve as a reference point for future studies

The Challenge of Change: Dealing with the Legacy of the Modern Movement Dirk van den Heuvel, Maarten Mesman, Bert Lemmens, 2008-09-15 Conservation of architecture and the conversation of Modern architecture in particular has assumed new challenges Rather than attempting to return a Modern building to its resumed original state the challenge of these proceedings is to revalue the essence of the manifold manifestations of Modern architecture and redefine its meanings in a rapidly changing world of digital revolution worldwide mobility and environmental awareness This volume aims to provide a variety of platforms for the exchange of ideas and experience A large international group of architects historians scholars preservationists and other parties involved in the processes of preserving renovating and transforming Modern buildings has been invited to investigate the paradox of the Modern monument and to reflect on the manifold dilemmas of change and continuity The general theme is elaborated through five sub themes The sub theme Change and Continuity addresses the tensions between change and continuity from a historical theoretical perspective Restructuring Cities and Landscapes focuses on the larger scale of city and landscape while Shifts in Programme and Flexibility draws attention to the scale of the building or building complex and questions limits of re use and flexibility The fourth sub theme deals with education and the fifth sub theme Progress Technology and Sustainability considers specific issues of techniques and materials

The Metallurgy of Anodizing Aluminum Jude Mary Runge, 2018-02-01 In this book the history of the concepts critical to the discovery and development of aluminum its alloys and the anodizing process are reviewed to provide a foundation for the challenges achievements and understanding of the complex relationship between the aluminum alloy and the reactions that occur during anodic oxidation Empirical knowledge that has long sustained industrial anodizing is clarified by viewing the process as corrosion science addressing each element of the anodizing circuit in terms of the Tafel Equation This innovative approach enables a new level of understanding and engineering control for the mechanisms that occur as the oxide nucleates and grows developing its characteristic highly ordered structure which impact the practical function of the

anodic aluminum oxide **Do it Yourself** Carolyn M. Goldstein,1998 Do It Yourself investigates the history behind the current do it yourself craze in homebuilding and home repair The origins of home improvement can be traced to the early part of the century when government loan programs placed home ownership within the reach of growing numbers of families mass circulation magazines began providing their readers with information about home remodeling and repair and increasing numbers of Americans turned to the manual arts and handicrafts as leisure time pursuits World War II provided many Americans with the skills and confidence to undertake home improvement projects on their own and after the war changes in the manufacturing and retail of tools and equipment created new possibilities for transforming one's home As home remodeling became a central feature of domestic life and consumer culture the do it yourself movement was born coming of age in the baby boomer 1950s and 1960s when Americans created suburban paradises and reclaimed decaying urban centers The text of Do It Yourself which investigates topics ranging from women's roles in home repair to historic preservation is a lively mix of illustrations including period photographs magazine spreads and advertisements and clearly written analysis of the trends behind these images Caring for the Past ,2002 *Building a Market* Richard

Harris,2020-03-04 A unique study of how the American Dream came to be and came to be constantly updated and renovated A pleasure to read American Historical Review Each year North Americans spend as much money fixing up their homes as they do buying new ones This obsession with improving our dwellings has given rise to a multibillion dollar industry that includes countless books magazines cable shows and home improvement stores Building a Market charts the rise of the home improvement industry in the United States and Canada from the end of World War I into the late 1950s Drawing on the insights of business social and urban historians and making use of a wide range of documentary sources Richard Harris shows how the middle class preference for home ownership first emerged in the 1920s and how manufacturers retailers and the federal government combined to establish the massive home improvement market and a pervasive culture of Do It Yourself Deeply insightful Building a Market is the carefully crafted history of the emergence and evolution of a home improvement revolution that changed not just American culture but the American landscape as well An important topic that deserves to be widely read by scholars of business history urban history and social history Journal of American History

History of Construction Cultures Volume 2 João Mascarenhas-Mateus,Ana Paula Pires,2021-07-08 Volume 2 of History of Construction Cultures contains papers presented at the 7ICCH Seventh International Congress on Construction History held at the Lisbon School of Architecture Portugal from 12 to 16 July 2021 The conference has been organized by the Lisbon School of Architecture FAUL NOVA School of Social Sciences and Humanities the Portuguese Society for Construction History Studies and the University of the Azores The contributions cover the wide interdisciplinary spectrum of Construction History and consist on the most recent advances in theory and practical case studies analysis following themes such as epistemological issues building actors building materials building machines tools and equipment construction processes

building services and techniques structural theory and analysis political social and economic aspects knowledge transfer and cultural translation of construction cultures Furthermore papers presented at thematic sessions aim at covering important problematics historical periods and different regions of the globe opening new directions for Construction History research We are what we build and how we build thus the study of Construction History is now more than ever at the centre of current debates as to the shape of a sustainable future for humankind Therefore History of Construction Cultures is a critical and indispensable work to expand our understanding of the ways in which everyday building activities have been perceived and experienced in different cultures from ancient times to our century and all over the world **Materials for a Healthy, Ecological and Sustainable Built Environment** Emina K. Petrović, Brenda Vale, Maibritt Pedersen Zari, 2017-03-23 Principles for Evaluating Building Materials in Sustainable Construction Healthy and Sustainable Materials for the Built Environment provides a comprehensive overview of the issues associated with the selection of materials for sustainable construction proposing a holistic and integrated approach The book evaluates the issues involved in choosing materials from an ecosystem services perspective from the design stage to the impact of materials on the health of building users The three main sections of the book discuss building materials in relation to ecosystem services the implications of materials choice at the design stage and the impact of materials on building users and their health The final section focuses on specific case studies that illustrate the richness of solutions that existed before the rise of contemporary construction and that are consistent with a sustainable approach to creating built environments These are followed by modern examples which apply some if not all of the principles discussed in the first three sections of the book Provides a holistic and integrated approach to the issues associated with the selection of materials for sustainable construction Provides a thorough understanding of ecosystem services based on ecology research for built environment design Provides an original review of the impact of materials on human health Provides case studies to illustrate the points above **Encyclopedia of Twentieth Century Architecture** R. Stephen Sennott, 2004 For more information including the introduction a full list of entries and contributors a generous selection of sample pages and more visit the Encyclopedia of 20th Century Architecture website Focusing on architecture from all regions of the world this three volume set profiles the twentieth century's vast chronicle of architectural achievements both within and well beyond the theoretical confines of modernism Unlike existing works this encyclopedia examines the complexities of rapidly changing global conditions that have dispersed modern architectural types movements styles and building practices across traditional geographic and cultural boundaries **Housing and Dwelling** Barbara Miller Lane, 2006-11 A collection of thought provoking essays on the changing face of domestic architecture over two centuries highlighting the wide range of source materials and theoretical perspectives available to scholars of architectural history
