Twins Alessandra Piontelli,2002 Though much has been written about twins very little research has been done into their everyday lives both postnatal and prenatal In this fascinating new study Alessandra Piontelli follows the development and behaviour of thirty pairs of twins from their early life in the womb through to their third year of childhood Drawing on detailed ultrasound observations and work with mothers and families in clinical and natural settings the text traces the subtle ways in which various types of twins live behave and interact with their unequally shared and unique pre and postnatal environments Piontelli shows how from early on distinctive and personal traits can be seen in the behaviour of each member of a twin couple and how these traits continue and strengthen well beyond birth The book describes not only the behaviour of the twins but the impact they have on the lives of their family and carers what family members say how they react and how the family changes Scientifically based but warmly human in content this unique longitudinal study offers new insight for professionals working with mothers and families of twins and for researchers in human development across a range of disciplines

Designing Babies Robert Klitzman, 2019-09-09 Since the first test tube baby was born over 40 years ago In Vitro Fertilization and other Assisted Reproductive Technologies ARTs have advanced in extraordinary ways producing millions of babies An estimated 20% of American couples use infertility services to help them conceive and that number is growing Such technologies permit thousands of people including gay and lesbian couples and single parents to have offspring Couples can now transmit or avoid passing on certain genes to their children including those for chronic disease and probably sometime soon height and eye color as well Prospective parents routinely choose even the sex of their future child and whether or not to have twins The possibilities of this rapidly developing technology are astounding especially in the United States where the procedures are practically unregulated and a large commercial market for buying and selling human eggs is swiftly growing New gene editing technology known as CRISPR allows for even more direct manipulation of embryos genes As these possibilities are increasingly realized potential parents doctors and policy makers face complex and critical questions about the use or possible misuse of ARTs Designing Babies confronts these questions examining the ethical social and policy concerns surrounding reproductive technology Based on in depth interviews with providers and patients Robert Klitzman explores how individuals and couples are facing quandaries of whether when and how to use ARTs He articulates the full range of these crucial issues from the economic pressures patients face to the moral and social challenges they encounter as they make decisions which will profoundly shape the life of their offspring In doing so he reveals the broader social and biological implications of controlling genetics ultimately arguing for closer regulation of procedures which affect the lives of generations to come and the future of our species as a whole
