theory of the Law of Nations much has been written by authors of great name and ability Upon practical questions much has been laid down by those distinguished civilians who have adorned the British and American Courts of Admiralty and whose masterly judgments full of wisdom and learning are the most perfect expositions of the best and purest principles of that law It has been attempted in the following lectures to pass briefly in review both series of authorities and to note the chief characteristics of the most eminent amongst them with a view to make them known to the student and not with any pretence to novelty of view or originality of treatment On the contrary the materials supplied by others have been freely used where the doctrine appeared to be sound or the criticism just About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

The Project of Positivism in International Law Mónica García-Salmones Rovira, 2013-11-28 International legal positivism has been crucial to the development of international law since the nineteenth century It is often seen as the basis of mainstream or traditional international legal thought The Project of Positivism in International Law addresses this theory in the long standing tradition of critical intellectual histories of international law It provides a nuanced analysis of the resilience of the economic positivist theory and shows how influential its role was in shaping the modern frameworks of international law The book argues that the rise of positivist international law was inseparable from philosophical developments placing the notion of conflict of interests at the centre of collective life Where previously international thought was dominated by notions of the right the just and the good increasingly international relations became viewed as interests in need of harmonisation In this context international law was re founded as the universal law that could harmonise the interests of both public and private international entities The book argues that these

evolutions in philosophical thought were bound up with the consolidation of capitalism and with the ideas about human existence and human nature which emerged in that process It provides an innovative analysis of the selected biography of ideas which it presents including a detailed focus on the work of Hans Kelsen one of the leading positivist thinkers of the twentieth century It also argues that the work of Lassa Oppenheim should be included within this analysis as providing some of the key founding texts of positivism in international law This book will be a fascinating read for scholars and students of international legal theory historians of ideas and legal philosophers
