Understand, Control and Enhance Your Psychic Ability Theresa M. Kelly, 2013-03-18 This groundbreaking book written by Metaphysicist and Bestselling Author Dr Theresa M Kelly utilizes an extensive list of scientific studies and laws to reveal how the laws of physics do not have to be rewritten to explain how psychic abilities work The author exposes that psychic abilities are possible due to wirelessly transmitted data and commands weakly emitted through the mind and bodies own natural electromagnetic radiation She also exposes that psychokinesis is possible by means of coupling and critically tuned frequencies operating in the electromagnetic near field The book includes several exercises and techniques enabling the reader to learn how to control and enhance their psychic or psychokinetic abilities including using scientific and safe means of enhancement With over fourteen years of hands on experience in her field Dr Theresa M Kelly bridges the gap between physics and metaphysics in a manner both easily comprehensible to the layperson and easily appreciated by professionals

Computer Methods for Engineering with MATLAB® Applications, Second Edition

Yogesh Jaluria, 2011-09-08 Substantially revised and updated Computer Methods for Engineering with MATLAB Applications Second Edition presents equations to describe engineering processes and systems It includes computer methods for solving these equations and discusses the nature and validity of the numerical results for a variety of engineering problems This edition now uses MATLAB in its discussions of computer solution New to the Second Edition Recent advances in computational software and hardware A large number of MATLAB commands and programs for solving exercises and to encourage students to develop their own computer programs for specific problems Additional exercises and examples in all chapters New and updated references The text follows a systematic approach for obtaining physically realistic valid and accurate results through numerical modeling It employs examples from many engineering areas to explain the elements involved in the numerical solution and make the presentation relevant and interesting It also incorporates a wealth of solved exercises to supplement the discussion and illustrate the ideas and methods presented The book shows how a computational approach can provide physical insight and obtain inputs for the analysis and design of practical engineering systems

Radioactive Ion Implantation of Thermoplastic Elastomers Veronica Borcea, 2008 The radioactive ion implantation wear measuring method RII has been used for many years as a tool to make highly sensitive real time in situ measurements of wear and corrosion in metallic or ceramic materials The method consists of the controlled implantation of radioactive ions of limited decay time in a thin layer at the surface of the material The progressive abrasion of the material results in a decline in radioactivity which is followed to monitor material losses The application of RII to control the wear of polymers is potentially of interest but it has been lagging behind because of uncertainties related to possible changes in material properties during and after the implantation and to the exact shape of implantation profiles In this thesis we investigate these issues on two thermoplastic elastomers among which one contains radiation sensitive unsaturated bonds using as ions ^7Be ^7Li and Kr The results of the sample characterisation indicate that the ^7Be and ^7Li implantations under properly selected conditions do not induce significant modifications in the materials The implantation of a stack of polymer thin films and the activity measurements performed to determine the implantation profile are also presented The experimental results on the ion implantation profiles and the determination of calibration curves are presented and discussed in comparison with simulated results The results indicate that it is possible to predict the implantation profile by means of simulations This bodes

well for the application of the RII method to polymer materials. An experimental study is presented regarding the possible redistribution of the implanted ^7Be after implantation. Since very few existing experimental techniques are able to detect light elements implanted in polymer targets at fluences less or equal to 10^{12} cm^{-2} with implantation depths of a few nm, a new method is presented which implies the use of plasma etching techniques in order to remove layers of polymers and measuring the remaining activity after each step. Our results indicate that a redistribution of the implanted ions takes place during the implantation process resulting in a scrambling of the initial implantation profile. Nevertheless, a suitable methodology to be used for wear measurements in polymers by using the RII method are still possible as we propose in the thesis.
