Urban Groundwater Pollution David Lerner, 2003-01-01 More than 50% of the world s population already live in cities and the proportion is rising extremely rapidly towards developed country levels of more than 90% Groundwater from wells is the major source of water supply for

many of these cities however groundwater is polluted by the cities that overlie it and sewerage systems are often *Integrated Urban Water Management: Humid Tropics* Jonathan N. Parkinson, Joel Avruch Goldenfum, Carlos Tucci, 2010-03-26 Excess water in the urban environment results in flooding which causes structural damage risks to personal safety and disruption to city life Water is also a major contributory factor for disease transmission as well as being the medium for transport of many pollutants These problems are of increasing concern due to climate changes and are part of **Urban Water Management** Roumen Arsov, J. Marsalek, W. Ed Watt, Evzen Zeman, 2012-12-06 Urban population growth dramatically alters material and energy fluxes in the affected areas with concomitant changes in landscape altered fluxes of water sediment chemicals and pathogens and increased releases of waste heat These changes then impact on urban ecosystems including water resources and result in their degradation Such circumstances make the provision of water services to urban populations even more challenging Changing weather patterns rising temperature and large variations in precipitation contribute to increased damages caused by weather related disasters including floods One of the major contributors to increasing flood peaks are land use changes and particularly urban development Consequently there is a need to look for low environmental impact land development and to manage runoff in urban areas by storm water management Much progress in the management of urban waters has been achieved in the most advanced jurisdictions but much more remains to be done In this respect the EC Water Framework Directive can provide some guidance Urban water management issues are particularly important in the countries in transition in Central and Eastern Europe During the last decade political economical and social changes in the countries under transition have influenced almost every element of the public sector including water services There is an urgent need for exchange of information among various countries on this issue and for identification of best approaches to achieving this transition
