**The Changing Alpine Treeline** David R. Butler, George P. Malanson, Stephen J. Walsh, Daniel B. Fagre, 2009-03-13 The alpine treeline ecotone ATE is an area of transition high on mountains where closed canopy forests from lower elevations give way to the open alpine tundra and rocky expanses above Alpine tundra is an island biome and its ecotone with forest is subject to change and like oceanic islands alpine tundra is subject to invasion or the upward advance of treeline The invasion of tundra by trees will have consequences for the tundra biome as invasion does for other island flora and fauna To examine the invasibility of tundra we take a plant's eye view wherein the local conditions become extremely important Among these local conditions we find geomorphology to be exceptionally important We concentrate on aspects of microtopography and microgeomorphology and microclimate because these are the factors that matter from the plant's eye view but we pay attention to multiple scales At coarse scales snow avalanches and debris flows are widespread and create disturbance treelines whose elevation is well below those controlled by climate At medium scales turf banked terraces create tread and riser topography that is a difficult landscape for a tree seedling to survive upon because of exposure to wind dryness and impenetrable surfaces At fine scales turf exfoliation of the fronts of turf banked risers and boulders offer microsites where tree seedlings may find shelter and are able to gain a foothold in the alpine tundra conversely however surfaces of needle ice pans and frost heaving associated with miniature patterned ground production are associated with sites inimical to seedling establishment or survival We explicitly consider how local scale processes propagate across scales into landscape patterns The objective of this book is to examine the controls on change at alpine treeline All the papers are focused on work done in Glacier National Park Montana USA Although any one place is limiting we are able to examine the alpine treeline here in some detail and an advantage is that the treeline ecotone in Glacier National Park is quite variable in itself due to the underlying variability in geomorphology at multiple scales This book will provide insights into an important ecological phenomenon with a distinctly geomorphic perspective The editors collectively have over 100 years of experience in working in geomorphology biogeography and ecology They also have each worked on research in Glacier National Park for several decades The book will be a reference for a variety of professionals and students both graduate and undergraduate with interests in Physical Geography Geomorphology Ecology and Environmental Science Because of the importance of the alpine treeline ecotone for recreation and aesthetic interests in mountain environments wildland and park managers will also use this book Subject matter

geomorphology at alpine treeline Expertise of contributors each editor brings over 25 years of experience in studies of ecotones and geomorphology and collectively over 100 years of experience in Glacier National Park Changing alpine treeline examines climate change *Recent Reports* ,1985 General Technical Report RMRS ,1998 **Targhee National Forest Ecological Unit Inventory** ,1999 **Wildland Fire in Ecosystems** ,2000 *Mountains and Plains* Dennis H. Knight, George P. Jones, William A. Reiners, William H. Romme, 2014-01-01 Many changes some discouraging others hopeful have occurred in the Rocky Mountain region since the first edition of this widely acclaimed book was published Wildlife habitat has become more fragmented once abundant sage grouse are now scarce and forest fires occur more frequently At the same time wolves have been successfully reintroduced and new approaches to conservation have been adopted For this updated and expanded Second Edition the authors provide a highly readable synthesis of research undertaken in the past two decades and address two important questions How can ecosystems be used so that future generations benefit from them as we have How can we anticipate and adapt to climate changes while conserving biological diversity **Plants of West-central Montana** Klaus Lackschewitz, 1986 General Technical Report INT. ,1995

Forest Development in Cold Climates John Alden, J. Louise Mastrantonio, Søren Ødum, 2013-06-29 As forests decline in temperate and tropical climates highly developed countries and those striving for greater economic and social benefits are beginning to utilize marginal forests of high latitude and mountainous regions for resources to satisfy human needs The benefits of marginal forests range from purely aesthetic to providing resources for producing many goods and services demanded by a growing world population Increased demands for forest resources and amenities and recent warming of high latitude climates have generated interest in reforestation and afforestation of marginal habitats in cold regions Afforestation of treeless landscapes improves the environment for human habitation and provides for land use and economic prosperity Trees are frequently planted in cold climates to rehabilitate denuded sites for the amenity of homes and villages and for wind shelter recreation agroforestry and industrial uses In addition forests in cold climates reduce the albedo of the earth's surface in winter and in summer they are small but significant long lived sinks for atmospheric carbon dioxide Finally growth and reproductive success of forests at their geographic limits are sensitive indices of climatic change As efforts to adapt forests to cold climates increase however new afforestation problems arise and old ones intensify Austral northern and altitudinal tree limits are determined by many different factors Current hypotheses for high latitude tree limits are based on low growing season temperatures that inhibit plant development and reproduction **Species Conservation and Management** H. Resit Akcakaya, Mark A. Burgman, Oskar Kindvall, Chris C. Wood, Per Sjögren-Gulve, Jeff S. Hatfield, Michael A. McCarthy, 2004-10-07 This edited volume is a collection of population and metapopulation models for a wide variety of species including plants invertebrates fishes amphibians reptiles birds and mammals Each chapter of the book describes the application of RAMAS GIS 4.0 to one species with the aim of demonstrating how various life history characteristics of the

species are incorporated into the model and how the results of the model has been or can be used in conservation and management of the species The book comes with a CD that includes a demo version of the program and the data files for each species Arapaho-Roosevelt, Pike-San Isabel, Grand Mesa-Uncompahgre-Gunnison, San Juan, Rio Grande and Medicine Bow-Routt National Forests (N.F.), Southern Rockies Canada Lynx Amendment ,2008 *Advances in Threat Assessment and Their Application to Forest and Rangeland Management* John M. Pye,2010 In July 2006 more than 170 researchers and managers from the United States Canada and Mexico convened in Boulder Colorado to discuss the state of the science in environmental threat assessment This two volume general technical report compiles peer reviewed papers that were among those presented during the 3 day conference Papers are organized by four broad topical sections Land Air and Water Fire and Pests Biota and are divided into syntheses and case studies Land topics include discussions of forest land conversion and soil quality as well as investigations of species responses to climate change Air and water topics include discussions of forest vulnerability to severe weather and storm damage modeling Fire topics include discussions of wildland arson and wildfire risk management as well as how people perceive wildfire risk and uncertainty Pests biota topics include discussions of risk mapping and probabilistic risk assessments as well as investigations of individual threats including the southern pine beetle and *Phytophthora alni* Ultimately this publication will foster exchange and collaboration between those who develop knowledge and tools for threat assessment and those who are responsible for managing forests and rangelands

*Whitebark Pine Communities* Diana F. Tomback,Stephen F. Arno,Robert E. Keane,2001 Whitebark pine is a dominant feature of western high mountain regions offering an important source of food and high quality habitat for species ranging from Clark's nutcracker to the grizzly bear But in the northwestern United States and southwestern Canada much of the whitebark pine is disappearing Why is a high mountain species found in places rarely disturbed by humans in trouble And what can be done about it *Whitebark Pine Communities* addresses those questions explaining how a combination of altered fire regimes and fungal infestation is leading to a rapid decline of this once abundant and ecologically vital species Leading experts in the field explain what is known about whitebark pine communities and their ecological value examine its precarious situation and present the state of knowledge concerning restoration alternatives The book presents an overview of the ecology and status of whitebark pine communities offers a basic understanding of whitebark pine taxonomy distribution and ecology including environmental tolerances community disturbance processes regeneration processes species interactions and genetic population structure identifies the threats to whitebark pine communities explains the need for management intervention surveys the extent of impact and losses to date More importantly the book clearly shows that the knowledge and management tools are available to restore whitebark pine communities both locally and on a significant scale regionally and it provides specific information about what actions can and must be taken *Whitebark Pine Communities* offers a detailed portrait of the ecology of whitebark pine communities and the current threats to them It brings together leading

experts to provide in depth information on research needs management approaches and restoration activities and will be essential reading for ecologists land managers and anyone concerned with the health of forest ecosystems in the western United States

**Tropical Ecosystems: Structure, Functions and Challenges in the Face of Global Change** Satish Chandra Garkoti, Skip J. Van Bloem, Peter Z. Fulé, Rajeev L. Semwal, 2019-09-24 The book brings together research topics having a broad focus on human and climate change impacts on the terrestrial ecosystems in the tropics in general and more specifically from the most significant and vulnerable Himalayan ecosystem A total of 16 contributions included in the book cover a diverse range of global change themes such as the impacts of changing temperature and precipitation on soil ecosystems forest degradation extent and impacts of invasive species plant responses to pollution climate change impacts on biodiversity and tree phenology environmental changes associated with land use importance of traditional knowledge in climate change adaptation timberline ecosystems and role of integrated landscape modeling for sustainable management of natural resources The book is a collective endeavour of an international multidisciplinary group of scientists focused on improving our understanding of the impacts of global change on the structure and functioning of tropical ecosystems and addressing the challenges of their future sustainable management We hope that the book will help researchers working in the areas of ecology and environmental science to update their knowledge We also expect that natural resource managers and policy planners will find explanations for some of their observations and hypotheses on multiple global change factors impacting tropical ecosystems and especially Himalayan ecosystems

unknown in 1992 In depth guide to Southeast Alaska s flora and fauna more than an identification manual Nature explores how the species and habitats encountered in the woods and waters of Southeast Alaska fit into the bigger picture
