Eye Tracking

Kenneth Holmqvist,Marcus Nyström,Richard Andersson,Richard Dewhurst,Halszka Jarodzka,Joost van de Weijer,2011-09-22 We make 3 5 eye movements per second and these movements are crucial in helping us deal with the vast amounts of information we encounter in our everyday lives In recent years thanks to the development of eye tracking technology there has been a growing interest in monitoring and measuring these movements with a view to understanding how we attend to and process

the visual information we encounter Eye tracking as a research tool is now more accessible than ever and is growing in popularity amongst researchers from a whole host of different disciplines Usability analysts sports scientists cognitive psychologists reading researchers psycholinguists neurophysiologists electrical engineers and others all have a vested interest in eye tracking for different reasons The ability to record eye movements has helped advance our science and led to technological innovations However the growth of eye tracking in recent years has also presented a variety of challenges in particular the issue of how to design an eye tracking experiment and how to analyse the data This book is a much needed comprehensive handbook of eye tracking methodology It describes how to evaluate and acquire an eye tracker how to plan and design an eye tracking study and how to record and analyse eye movement data Besides technical details and theory the heart of this book revolves around practicality how raw data samples are converted into fixations and saccades using event detection algorithms how the different representations of eye movement data are calculated using AOIs heat maps and scanpaths and how all the measures of eye movements relate to these processes Part I presents the technology and skills needed to perform high quality research with eye trackers Part II covers the predominant methods applied to the data which eye trackers record These include the parsing of raw sample data into oculomotor events and how to calculate other representations of eye movements such as heat maps and transition matrices Part III gives a comprehensive outline of the measures which can be calculated using the events and representations described in Part II This is a taxonomy of the measures available to eye tracking researchers sorted by type of movement of the eyes and type of analysis For anyone in the sciences considering conducting research involving eye tracking this book will be an essential reference work

Human Development from Middle Childhood to Middle Adulthood Lea Pulkkinen, 2017-06-26 This seminal work focuses on human development from middle childhood to middle adulthood through analysis of the research findings of the groundbreaking Jyväskylä Longitudinal Study of Personality and Social Development JYLS The JYLS project which began in 1968 has generated extensive publications over many years but this is the first comprehensive summary that presents the conceptual framework the research design and methodology and the findings The study looks at the development over time of issues related to personality identity health anti social behavior and well being and is unparalleled in its duration intensity comprehensiveness and psychological richness The thorough synthesis of this

study illustrates that there are different paths to adulthood and that human development cannot be described in average terms The 42 year perspective that the JYLS provides shows the developmental consequences of children s differences in socioemotional behavior over time and the great significance of children s positive socioemotional behavior for their further development until middle age Not only will the book be an invaluable tool for those considering research methods and analysis on large datasets it is ideal reading for students on lifespan courses and researchers methodologically interested in longitudinal research

Mathematical Approaches to Neural Networks J.G. Taylor,1993-10-27 The subject of Neural Networks is being seen to be coming of age after its initial inception 50 years ago in the seminal work of McCulloch and Pitts It is proving to be valuable in a wide range of academic disciplines and in important applications in industrial and business tasks The progress being made in each approach is considerable Nevertheless both stand in need of a theoretical framework of explanation to underpin their usage and to allow the progress being made to be put on a firmer footing This book aims to strengthen the foundations in its presentation of mathematical approaches to neural networks It is through these that a suitable explanatory framework is expected to be found The approaches span a broad range from single neuron details to numerical analysis functional analysis and dynamical systems theory Each of these avenues provides its own insights into the way neural networks can be understood both for artificial ones and simplified simulations As a whole the publication underlines the importance of the ever deepening mathematical understanding of neural networks
