Identified Flying Objects Dr. Michael P. Masters,2019-03-22 Could UFOs and Aliens simply be us but from the future This provocative new book cautiously examines the premise that extraterrestrials may instead be our distant human descendants using the anthropological tool of time travel to visit and study us in their own hominin evolutionary past Dr Michael P Masters a professor of biological anthropology specializing in human evolutionary anatomy archaeology and biomedicine explores how the persistence of long term biological and cultural trends in human evolution may ultimately

result in us becoming the ones piloting these disc shaped craft which are likely the very devices that allow our future progeny to venture backward across the landscape of time Moreover these extraterrestrials are ubiquitously described as bipedal large brained hairless human like beings who communicate with us in our own languages and who possess technology advanced beyond but clearly built upon our own These accounts coupled with a thorough understanding of the past and modern human condition point to the continuation of established biological and cultural trends here on Earth long into the distant human future

Irwin Allen Television Productions, 1964-1970 Jon Abbott,2015-06-14 Before establishing himself as the master of disaster with the 1970s films The Poseidon Adventure and The Towering Inferno Irwin Allen created four of television s most exciting and enduring science fiction series Voyage to the Bottom of the Sea Lost in Space The Time Tunnel and Land of the Giants These 1960s series were full of Allen s favorite tricks techniques and characteristic touches and influenced other productions from the original Star Trek forward Every science fiction show owes something to Allen yet none has equaled his series pace excitement or originality This detailed examination and documentation of the premise and origin of the four shows offers an objective evaluation of every episode and demonstrates that when Irwin Allen s television episodes were good they were great and when they were bad they were still terrific fun

The Illustrated Dinosaur Movie Guide ,1993 **The Future Revisited** Francoise Schiltz,2012-05-04 The Future Revisited examines Hollywood adaptations of Jules Verne stories and is an interdisciplinary study that offers a fresh perspective on film history French literature science fiction and America in the 1950s It is a fascinating and authoritative account of how the stories of Jules Verne a distinguished French novelist better known around the world as the father of science fiction and an accurate predictor of much of the twentieth century found particular resonance with US filmmakers in the 1950s Schiltz looks at four of the most popular films Around the World in 80 Days 20 000 Leagues Under the Sea Journey to the Center of the Earth and Mysterious Island and argues that there were many parallels between Verne s technological adventures and postwar America with its themeparks shopping malls Levittowns and plethora of consumer goods Just as nineteenth century readers of Verne s books could experience travel from the comfort of their seats viewers of these films could be swept away on an imaginary flight a voyage in a submarine or a trek to the earth s core all in spectacular widescreen and with ground breaking special effects Yet the pleasures offered were ambivalent encounters with exotic places and cultures might have led the audience to question common assumptions such as gender roles seeing futuristic domestic spaces could highlight the confusion of attitudes to private and public life in suburbia and the films blending of nostalgia and progress might draw attention to society s tug of war between innovation and conformity
