Moody's Bank and Finance Manual ,1992 **Readings in Machine Learning** Jude W. Shavlik,Thomas Glen

Dietterich,1990 The ability to learn is a fundamental characteristic of intelligent behavior Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s The 1980s saw tremendous growth in the field and this growth promises to continue with valuable contributions to science engineering and business Readings in Machine Learning collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn The editors in cooperation with a group of expert referees have chosen important papers that empirically study theoretically analyze or psychologically justify machine learning algorithms The papers are grouped into a dozen categories each of which is introduced by the editors

Building Intelligent Agents Gheorghe Tecuci,1998-06-23 Building Intelligent Agents is unique in its comprehensive coverage of the subject The first part of the book presents an original theory for building intelligent agents and a methodology and tool that implement the theory The second part of the book presents complex and detailed case studies of building different types of agents an educational assessment agent a statistical analysis assessment and support agent an engineering design assistant and a virtual military commander Also featured in this book is Disciple a toolkit for building interactive agents which function in much the same way as a human apprentice Disciple based agents can reason both with incomplete information but also with information that is potentially incorrect This approach in which the agent learns its behavior from its teacher integrates many machine learning and knowledge acquisition techniques taking advantage of their complementary strengths to compensate for each others weakness As a consequence it significantly reduces or even eliminates the involvement of a knowledge engineer in the process of building an intelligent agent

Inside Case-Based Explanation Roger C. Schank,Alex Kass,Christopher K. Riesbeck,2014-02-24 This book is the third volume in a series that provides a hands on perspective on the evolving theories associated with Roger Schank and his students The primary focus of this volume is on constructing explanations All of the chapters relate to the problem of building computer programs that can develop hypotheses about what might have caused an observed event Because most researchers in natural language processing don t really want to work on inference memory and learning issues most of their sample text fragments are chosen carefully to de emphasize the need for non text related reasoning The ability to come up with hypotheses about what is really going on in a story is a hallmark of human intelligence The biggest difference between truly intelligent readers and less intelligent ones is the extent to which the reader can go beyond merely

understanding the explicit statements being communicated Achieving a creative level of understanding means developing hypotheses about questions for which there may be no conclusively correct answer at all The focus of the lab during the period documented in this book was to work on getting a computer program to do that The volume adopts a case based approach to the construction of explanations which suggests that the main steps in the process of explaining a given anomaly are as follows Retrieve an explanation that might be relevant to the anomaly Evaluate whether the retrieved explanation makes sense when applied to the current anomaly Adapt the explanation to produce a new variant that fits better if the retrieved explanation doesn't fit the anomaly perfectly Readings in Knowledge Acquisition and Learning Bruce G. Buchanan, David C. Wilkins, 1993 Readings in Knowledge Acquisition and Learning collects the best of the artificial intelligence literature from the fields of machine learning and knowledge acquisition This book brings together the perspectives on constructing knowledge based systems from these two historically separate subfields of artificial intelligence
