McGregor, 2012-12-06 Nineteen eighty six is a most appropriate year in which to be writing about developments in the organ specific autoimmune endocrine diseases It celebrates the publication 30 years ago in 1956 of the classic papers of Roitt and Doniach and their co workers 1 and of Rose and Witebsky² and Adams³ and Purves These three sets of fundamental observations provided the initial building blocks upon which much of what has been established in the field in the last 30 years was built No publication of this nature on endocrine autoimmune disease can cover every aspect of the subject I have chosen to highlight the organs thyroid and pancreas which have attracted the most attention and the areas of work within these fields within which most research effort is currently focused There are still some gaps the insulin and TSH receptors are not considered nor in any detail are the role of cytotoxic mechanisms in mediating gland destruction Molecular biology will undoubtedly in the next few years clarify once and for all the controversy that surrounds the structure of the TSH receptor and T cell cloning the role of cell mediated cytotoxicity The pathogenetic mechanisms underlying

autoimmunity are increasingly well understood and the search for the aetiology has begun

Thyroid and Heart Failure Giorgio Iervasi, Alessandro Pingitore, 2009-08-29 Both thyroid dysfunction and heart failure show a high prevalence in the adult population. Frequently in clinical practice a multidisciplinary approach is useful to optimize the management of patients with these conditions. Although there is no doubt regarding the close link between cardiovascular pathophysiology and thyroid homeostasis, our understanding of this association is far from being exhaustive. Thyroid hormone regulates the expression of cardiac specific functional contractile and structural proteins and plays a pivotal role in modulating both diastolic and systolic function as well as peripheral vascular resistance. The close relationship between thyroid and heart dysfunction is strongly supported by recent evidence demonstrating that an altered thyroid profile is a negative prognostic predictor in patients with heart failure. The treatment of chronic heart failure especially in advanced stages of the disease continues to be an open and challenging field. The potential of novel thyroid hormone therapies that address the molecular biology of thyroid dysfunction and heart failure thus represents an attractive area of multidisciplinary scientific interest. This book is a readable integrated and highly up to date presentation of the clinical pathophysiological and basic science aspects of thyroid heart failure interactions. It addresses a complex subject in an approach that targets a large audience of readers.
