

The image is a composite. The top half shows a city skyline, likely New York City, with several prominent skyscrapers like the Empire State Building and One World Trade Center. The sky is filled with dramatic, orange and yellow clouds from a sunset or sunrise. The bottom half of the image shows a large crowd of people, seen from behind, standing on a wooden pier or walkway that extends into a body of water. The people are silhouetted against the bright, hazy light of the horizon. The overall mood is contemplative and hopeful.

One can survive without
trust. But living means having
faith in others and Others.

What It Means To Survive:

Darwinian Creativity and Memetics Maria Kronfeldner, 2014-09-11 Maria Kronfeldner examines how Darwinism has been used to explain novelty and change in culture through the Darwinian approach to creativity and the theory of memes. The first claims that creativity is based on a Darwinian process of blind variation and selection while the latter claims that culture is based on and explained by units called memes that are similar to genes. Both theories try to describe and explain mind and culture by applying Darwinism by way of analogies. Kronfeldner shows that the analogies involved in these theories lead to claims that give either wrong or at least no new descriptions or explanations of the phenomena at issue. Whereas the two approaches are usually defended or criticized on the basis that they are dangerous for our vision of ourselves, this book takes a different perspective: it questions the acuteness of these approaches. Darwinian theory is not like a dangerous wolf hunting for our self-image. Far from it, in the case of the two analogical applications addressed in this book, Darwinian theory is shown to behave more like a disoriented sheep in wolf's clothing.

Modelling Survival Data in Medical Research David Collett, 2015-05-04 *Modelling Survival Data in Medical Research* describes the modelling approach to the analysis of survival data using a wide range of examples from biomedical research. Well known for its nontechnical style, this third edition contains new chapters on frailty models and their applications, competing risks, non-proportional hazards, and dependent censoring.

Risk Assessment and Decision Analysis with Bayesian Networks Norman Fenton, Martin Neil, 2018-09-03 Since the first edition of this book published, Bayesian networks have become even more important for applications in a vast array of fields. This second edition includes new material on influence diagrams, learning from data, value of information, cybersecurity, debunking bad statistics, and much more. Focusing on practical real-world problem solving and model building as opposed to algorithms and theory, it explains how to incorporate knowledge with data to develop and use Bayesian causal models of risk that provide more powerful insights and better decision making than is possible from purely data-driven solutions. Features: Provides all tools necessary to build and run realistic Bayesian network models. Supplies extensive example models based on real risk assessment problems in a wide range of application domains, provided for example: finance, safety systems, reliability, law, forensics, cybersecurity, and more. Introduces all necessary mathematics, probability, and statistics as needed. Establishes the basics of probability, risk, and building and using Bayesian network models before going into the detailed applications. A dedicated website contains exercises and worked solutions for all chapters along with numerous other resources. The AgenaRisk software contains a model library with executable versions of all of the models in the book. Lecture slides are freely available to accredited academic teachers adopting the book on their course.
