Duckweed Profitable Feed for Tilapia Farming Maximus Basco,2012-12-11 Tilapia Feed Duckweed is a tiny aquatic plant covering stagnant water bodies it s seen in channels and waterways in semi tropical and tropical

climates in most countries The green three rounds fronds plant or any of its four genera is known to many people who have seen it without realizing such aquatic plant is Duckweed or that such an abundant microphyte plant considered an invasive plant offers a great potential as animal feed specially for fish Its high level of protein content makes it an ideal fish feed for Tilapia Carp and possibly other fish as well with great potential savings as fish feed Duckweeds have structural features that have been simplified by natural selection A Duckweed leaf is flat and ovoid Many species have adventitious roots which function as a stability organ and which tend to lengthen as mineral nutrients in water are exhausted Compared with most plants Duckweed leaves have little fiber 5% in dry matter of cultivated plants as they do not need to support upright structures As a result the plant has little or no indigestible material even for monogastric animals like fish This contrasts with many crops such as soya beans rice or maize where approximately 50% of the biomass is in the form of high fiber and low digestibility residues Their unique properties such as their phenomenal growth rate it doubles its size every twenty four 24 hours or so offers great potential savings for the animal grower Its high protein content its ability to clean wastewater and growth quickly even in brackish water have been investigated and documented in the last ten years This manual intends to propagate the value of Duckweed as a food alternative to animal growth focusing this intent on fish farming where its potential impact will be recognized immediately by a savvy fish farmers for many reasons discussed here In the last two decades Duckweed has been investigated for commercial applications seeking to treat wastewater by American firms mainly by the PRISM Group which pioneered Duckweed farming in India and Peru Both investigative programs in South Asia and Latin America suggested that Duckweed cropping would be important as a source of fish and poultry feed additionally the investigation demonstrated the use of Duckweed as a wastewater treatment alternative This Technical Study for Latin America and Asia was designed to put together relevant information on Duckweed farming its beneficial uses and to make such information available to people worldwide The information in this technical manual comes from many sources the contribution of the staff at the experimental station in Bangladesh and its directors Harinder S Kohli and Mohammed Ikramullah are acknowledged Paul Skillicorn and William Spira of the PRISM Group and William Journey Viet Ngo of the Lemna Corporation and Richard Middleton of Kalbermatten Associates are given recognition here Others recognized for this important technical work are Grimshaw Khouri Leeuwrik van Santen and Macoun Professor Thomas Popma of the International Center for Aquaculture at Auburn University provided technical support

Handbook on Ingredients for Aquaculture Feeds J.W. Hertrampf, F. Piedad-Pascual, 2012-12-06 Current growth in global aquaculture is paralleled by an equally significant increase in companies involved in aquafeed manufacture Latest information has identified over 1 200 such companies not including those organizations in production of a variety of other materials i e vitamins minerals and therapeutics all used in varying degrees in proper feed formulation Aquaculture industries raising particular economically valued species i e penaeid shrimps and salmonids are making major demands on feed ingredients while relatively new

industries such as tilapia farming portend a significant acceleration in demand for properly formulated aquafeeds by the end of the present decade and into the next century As requirements for aquafeeds increase shortages are anticipated in various ingredients especially widely used proteinaceous resources such as fish meal A variety of other proteinaceous commodities are being considered as partial or complete replacement for fish meal especially use of plant protein sources such as soybean meal In the past five years vegetable protein meal production has increased 10% while fish meal production has dropped over 50% since 1989 largely attributed to overfishing and serious decline in wild stock Throughout fisheries processing industries traditional concepts as waste have given way to more prudent approaches emphasizing total by product recovery Feed costs are a major consideration in aquaculture where in some groups i.e. salmonids high protein containing feeds using quality fish meal can account for as much as 40 to 60% of production costs **Daily Graphic** Ransford Tetteh,2010-01-11
