

The background of the entire slide is a close-up photograph of a piece of wood. The wood is heavily decayed, with a large, irregular, light-colored area in the center where the bark has been eaten away. Numerous small, dark, circular holes, characteristic of insect damage, are scattered across the wood surface. The wood's natural grain is visible, showing a mix of brown and tan colors.

Timber Decay in Buildings and Its Treatment Brian Ridout, 2015 *Timber Decay in Buildings and Its Treatment* Brian V. Ridout, 1992 Timber Decay in Buildings Brian Ridout, 2013-06-17 This is the first book to tackle all the issues relating to timber decay It presents the facts and explores timber decay problems through case studies These are illustrated with clear self explanatory photographs for the reader to use as a diagnostic aid Section 1 discusses timber as a living material Section 2 deals with decay organisms and their habitat requirements Section 3 moves on to the building as an environment for timber and discusses the ways in which wood responds to moisture change Section 4 ends with an approach to timber decay which integrates knowledge on the decay organism its requirements and natural predators with appropriate and targeted chemical treatments **Timber Decay in Buildings and Its Treatment** Brian Ridout, 2019 This is a book about the insects and fungi that may appear in building timbers if unnoticed or unavoidable maintenance problems allow them to remain damp There are two options if a problem is found The building owner or occupier may require the organism to be rapidly exterminated and a document issued which seems to reassure that it will not come back In this case they must accept generally expensive and frequently destructive chemical treatments using more or less noxious pesticides Unfortunately each decade s panacea has usually become the next decade s poison and a pesticide accepted as safe has proved elusive Pesticides may be used in a safe manner and this is the province of the remedial company but legislation is continuously evolving and pesticides are becoming increasingly unpopular The second option is to take a little time and to consider the problem This may not always be possible but in many situations a little background knowledge can make a considerable difference Frequently an understanding of why the damage has occurred together with an understanding of insect or fungi requirements and limitations can reduce treatments or show that they are unnecessary *Proceedings of the ...
