What Happens One Second After:

Investigation of the Assassination of President John F. Kennedy: September 6, 7, and 8, 1978 United States. Congress. House. Select Committee on Assassinations, 1978 *Understanding Word and Sentence* G.B. Simpson, 1991-01-14

Research concerning structure and processing in the mental lexicon has achieved central prominence within cognitive psychology and psycholinguistics. Historically, however, much of the research on the lexicon focussed not on its role in language comprehension but as a medium for studying semantic memory. This picture has changed in recent years with much more research examining the role of lexical processes and output in language comprehension. Gathered together in this volume is the work of some of those researchers who are responsible for this shift of emphasis. Chapters deal with the role of sentence contexts in word recognition processes involved in the activation and enhancement of lexical information and the interaction of lexical and syntactic information in sentence processing. A wide range of theoretical and empirical issues relating to language understanding are discussed.

Locating Consciousness Valerie Gray Hardcastle, 1995-01-01

Locating Consciousness argues that our qualitative experiences should be aligned with the activity of a single and distinct memory system in our mind/brain. Spelling out in detail what we do and do not know about phenomenological experience, this book denies the common view of consciousness as a central decision making system. Instead, consciousness is viewed as a lower level dynamical structure underpinning our information processing. This new perspective affords novel solutions to a wide range of problems: the absent qualia, the binding problem, the inverted spectra, the specter of epiphenomenalism, the explanatory gap, the distinction between objective and subjective, and the general skeptical doubts about the viability of the naturalist project itself. Drawing on recent data in psychology and neuroscience, *Locating Consciousness* also discusses when we become conscious and when we should think other animals are conscious.

Moving without a Body Stamati Portanova, 2024-02-06

A radically empirical exploration of movement and technology and the transformations of choreography in a digital realm. Digital technologies offer the possibility of capturing, storing, and manipulating movement, abstracting it from the body and transforming it into numerical information. In *Moving without a Body*, Stamati Portanova considers what really happens when the physicality of movement is translated into a numerical code by a technological system. Drawing on the radical empiricism of Gilles Deleuze and Alfred North Whitehead, she argues that this does not amount to a technical assessment of software's capacity to record motion but requires a philosophical rethinking of what movement itself is or can become. Discussing the development of different audiovisual tools and the shift from analog to digital, she focuses on some choreographic realizations of this evolution, including works by Loie Fuller and Merce Cunningham. Throughout, Portanova considers these technologies and dances as ways to think rather than just perform or perceive movement. She distinguishes the choreographic thought from the performance: a body performs a movement and a mind thinks or choreographs a dance. Similarly, she sees the move from analog to digital as a shift in conception rather than

simply in technical realization Analyzing choreographic technologies for their capacity to redesign the way movement is thought Moving without a Body offers an ambitiously conceived reflection on the ontological implications of the encounter between movement and technological systems
