- Check booms, joints, and cylinders for tightness.
- Check for loading asymmetries.

Make sure that the booms are not loaded by themselves.

During the lifting and lowering boom operation, the boom should be in a horizontal position.

Check the hydraulic system for potential damage visible from the outside in order to make sure that such damage will not result in a sudden leakage. All oil leaks must be repaired immediately.

NOTE: Do not ever attempt to touch or plug an oil leak with your hand because it only takes fluid injected at a pressure of 10 bar to penetrate your skin and possibly cause serious personal injury, even death.

The following service and checks are to be made at the end of each workday

- Clean the machine and check it for potential failures or leaks. It is particularly important to check the machine in the winter. Remove all snow, dirt, and slush before it freezes and gets stuck.
- If it is time to change oil or lubricate, do it while the machine is still warm.
