Análisis de fallos en sistemas aeronáuticos es un libro cuya génesis es la investigación del aspecto técnico de la industria aeroespacial con una perspectiva interdisciplinaria y una visión integral de aporte a la seguridad operacional. Se trata de una obra de utilidad para todos los sectores y especialidades de la actividad aeronáutica. A través de los avances técnicos y la investigación de accidentes y sucesos inseguros la industria ha logrado incrementar los niveles de seguridad con ese criterio está estructurada la obra. Desde los primeros contactos del hombre con los fallos de sus rudimentarias herramientas hasta los complejos materiales compuestos que hoy utiliza la industria aeroespacial esta obra contempla el amplio espectro de materias primas, propiedades intrínsecas, comportamiento técnico y propensión a fallos a través de una visión y un análisis interdisciplinario y sistémico. El texto está estructurado de modo que el lector pueda utilizar este libro como lectura técnica o como manual de consulta sobre temas específicos. La cronología de los temas se ha desarrollado desde un marco histórico evolutivo partiendo desde las materias primas y las técnicas de fabricación los conceptos de estructuras aeronáuticas la mecánica de fractura el análisis de fallos con y sin fractura la mecánica de fatiga los protocolos de análisis e investigación internacionales los factores humanos y organizacionales en el comportamiento técnico hasta un compendio de casos técnicos que posibilita la fácil comprensión de conceptos abstractos. Asimismo el libro se nutre de gran cantidad de información obtenida durante el proceso de investigación técnica y detección de fallos en accidentes e incidentes de aviación. Como se indicaba anteriormente la obra en su conjunto presenta una marcada visión sistémica cuyo objetivo es hallar las causas profundas de los fallos y las condiciones latentes presentes en el sistema que propician los accidentes e incidentes. El autor investigador técnico de accidentes de aviación lleva más de 15 años dedicado al estudio de la seguridad operacional desde el ámbito técnico por lo que ha participado en la investigación de accidentes de aviación de transporte aviación general y aviación deportiva. Actualmente desempeña su labor profesional en la autoridad aeronáutica de la República Argentina como director nacional de investigaciones. A Toolbox for the Application of the Rules of Targeting Tetyana (Tanya) Krupiy,2016-02-29 How military commanders interpret the rules of targeting

impacts not only on whether civilians and civilian objects are harmed in the course of a military operation but also on the scale of harm that ensues Commentators have queried whether military commanders observed the law even when parties to a conflict acted in accordance with mandates to protect civilians as was the case when a coalition of states bombed targets in Libya in 2011 However limited guidance is publicly available on how military commanders apply these rules on the battlefield In order to allow military commanders to exercise judgment in determining what steps they are required to take to spare civilians in a specific set of circumstances the rules of targeting are formulated in an open ended fashion which complicates one's ability to evaluate whether a particular military operation complies with the law By examining case studies ranging from Operation Desert Storm in 1991 to Operation Protective Edge in 2014 this book addresses lacunae in current scholarship It puts forward principles which capture how military commanders deliberate while interpreting what the rules of targeting require in particular scenarios International humanitarian law this book contends places a duty on attackers to assume risk in order to mitigate danger to civilians Drawing on the field of psychology this study provides an explanation of how military commanders assess when circumstances do not permit them to inform civilians about a forthcoming attack
