Theory for Today's Musician Textbook Ralph Turek, Daniel McCarthy, 2019-01-15

Theory for Today's Musician Third Edition recasts the scope of the traditional music theory course to meet the demands of the professional music world in a style that speaks directly and engagingly to today's music student. It uses classical, folk, popular, and jazz repertoires with clear explanations that link music theory to musical applications. The authors help prepare students by not only exploring how music theory works in art music but how it functions within modern music and why this knowledge will help them become better composers, music teachers, performers, and recording engineers. This broadly comprehensive text merges traditional topics such as part writing and harmony, diatonic, chromatic, neo-tonal, and atonal, with less traditional topics such as counterpoint and musical process, and includes the non-traditional topics of popular music, songwriting, jazz harmony, and the blues. The accompanying companion website provides interactive exercises that allow students to practice foundational theory skills. Written by experienced authors, both active classroom teachers for many years, Theory for Today's Musician is the complete and ideal theory text to enable today's student to accomplish their musical goals tomorrow. Updated and corrected throughout, the Third Edition includes expanded coverage of atonality and serialism, now separated into two chapters. Broadened treatment of cadences, including examples from popular music. Substantially rewritten chapter on songwriting. Interactive features of the text simplified to two types: Concept Checks and Review and Reinforcement for greater ease of use. New and updated musical examples added throughout. Charts, illustrations, and musical examples revised for increased clarity. Audio of musical examples now provided through the companion website. The accompanying Workbook offers exercises and assignments to accompany each chapter in the book. A companion website houses online tutorials with drills of basic concepts as well as audio. Making Sense of Music Susan McClary, 2025-05-30

One of the best known prose stylists in contemporary musicology, Susan McClary brings together a fascinating set of essays in *Making Sense of Music* that focus on temporality and the body as ways of understanding music. Prefaced by a Foreword from celebrated theatre director Peter Sellars, the chapters engage variously with ribald songs of the Renaissance, the performance of Bach fugues, time bending in seventeenth-century keyboard works, Grieg's Norwegian swerve, Florence Price's reclaiming of the spiritual, erotic scenarios in Mahler, representations of motherhood in Kaija Saariaho's operas, and queer elements in classical and popular repertoires. McClary grounds her readings within the specifics of historical time and place, even as she shows how the music itself relies on gesture and the body. In sum, this book demonstrates, in case studies taken from a wide variety of practices, how music draws upon and shapes human subjective experience.

Bennett, 2013-06-29 This was an exciting project to work on and I attempted to obtain a broad sampling of current research on the neuropsychology of epilepsy Because the emphasis of the book takes a neuropsychological perspective on epilepsy the coverage is not redundant with previous texts on this topic The book is organized around three themes although individual chapters certainly often extend beyond the part in which they are located The three major topics are the nature of epilepsy cognitive and emotional

consequences of epilepsy and treatment approaches to epilepsy and outcome In Part I following a historical overview of epilepsy in Chapter 1 by Sandra D Haynes and me Gerald C McIntosh presents a conceptualization of the epilepsies from a neurologist s perspective The characteristics of seizure types are discussed and the etiology of secondary epilepsies is described Epileptic syndromes are considered McIntosh outlines clinical seizure patterns associated with seizures originating from different cortical regions
