Treating Suicidal Behavior Treating Suicidal Behavior:

Treating Suicidal Behavior M. David Rudd, Thomas E. Joiner, M. Hasan Rajab, 2004-07-26 This manual provides an empirically supported approach to treating suicidality that is specifically tailored to today's managed care environment. Structured yet flexible, the model is fully compatible with current best practice standards. The authors establish the empirical and theoretical foundations for time-limited treatment and describe the specific tasks involved in assessment and intervention. The book then details effective ways to conduct a rapid case conceptualization and outpatient risk assessment, determine and implement individualized treatment targets, and monitor treatment outcomes. Outlined are clear-cut intervention techniques that focus on symptom management, restructuring the patient's suicidal belief system, and building such key skills as interpersonal assertiveness, distress tolerance, and problem solving. Other topics covered include the role of the therapeutic relationship, applications to group work, and longer-term therapy, the use of medications, patient selection, and termination of treatment. Illustrated with helpful clinical examples, the book features numerous tables, figures, and sample handouts, some of which may be reproduced for professional use.

Assessing and Treating Suicidal Thinking and Behaviors in Children and Adolescents Leslie W. Baker, Mary Ruth Cross, 2024-08-06 *Assessing and Treating Suicidal Thinking and Behaviors in Children and Adolescents* is a guide to working with children and young people who present with either obvious or hidden suicidal thoughts, preoccupations, or plans. Chapters explore a range of treatment approaches and focus on how to support parents, caregivers, families, and schools. Expressive therapies are highlighted, but the chapters also cover evidence-based models such as cognitive behavioral therapy (CBT), dialectical behavior therapy (DBT), and play therapy. Expressive therapists, school-based counselors, and other clinicians who work with at-risk children and adolescents from diverse communities and backgrounds will come away from this book with the tools they need to integrate the individual child's capabilities, sources of distress, and internal and external resources in order to build a developmentally sensitive treatment plan.

Assessment, Treatment, and Prevention of Suicidal Behavior Robert I. Yufit, David Lester, 2004-11-03 Current and comprehensive information concerning the assessment and treatment of suicidal persons and the prevention of suicidal behavior. The eighth leading cause of death in the United States and the second leading cause among U.S. teens, suicide is unique in being self-inflicted and is as such often preventable. By assessing the risk of suicide accurately, providing effective treatment according to this risk, and implementing strategies against suicidal urges, mental health professionals can successfully guide their clients away from this senseless taking of life. *Assessment, Treatment, and Prevention of Suicidal Behavior* provides the most current and comprehensive source of information, guidelines, and case studies for working with clients at risk of suicide. It offers clinicians, counselors, and other mental health professionals a practical toolbox on three main areas of interest: Screening and Assessment covers empirically based assessment techniques and how they can define dimensions of vulnerability and measure the risk of self-destructive behavior. Authors discuss

research on the use of each screening instrument guidelines and suggestions for using the instrument in practice and a case study illustrating its application Intervention and Treatment compares several different approaches for structuring psychotherapy with suicidal clients Each author covers a psychotherapy system its application to suicidal clients and a case study of its real world use Suicide and Violence explores the relationship between suicidal individuals and violence covering suicide in specific contexts such as school violence police confrontations and terrorist violence This section also includes a discussion of the increased risk of suicide in our more insecure and violent world as well as how to promote coping styles for these new anxieties While addressed mainly to psychologists social workers and other mental health professionals for use in serving their clients as well as students of psychology Assessment Treatment and Prevention of Suicidal Behavior is also an accessible and valuable resource for educators school counselors and others in related fields Treating Depressed and Suicidal Adolescents David A. Brent, Kimberly D. Poling, Tina R. Goldstein, 2011-06-16 Grounded in decades of research and the clinical care of thousands of depressed and suicidal teens this highly accessible book will enhance the skills of any therapist who works with this challenging population The authors describe the nuts and bolts of assessing clients and crafting individualized treatment plans that combine cognitive and behavioral techniques emotion regulation interventions family involvement and antidepressant medication Illustrated with many clinical examples each chapter includes a concise overview and key points Reproducible treatment planning forms and client handouts can also be downloaded and printed by purchasers in a convenient full page size **Clinical Manual for Assessment and Treatment of Suicidal Patients** John A. Chiles, Kirk D. Strosahl, Laura Weiss Roberts, 2018-08-23 Since the first edition of Clinical Manual for Assessment and Treatment of Suicidal Patients was published in 2005 advances have been made that increase our understanding of suicidal and self destructive behavior Although clinicians cannot unerringly predict which patients will die by suicide they can focus more successfully on early identification of suicidal behavior and effective intervention and this new edition of the clinical manual thoroughly explores not only assessment of suicidality but what comes after an at risk patient has been identified The authors argue that treating specific psychiatric disorders is not enough to prevent suicide and they offer clinicians the necessary information and strategies to bridge that gap The authors main premise is that suicide is a dangerous and short term problem solving behavior designed to regulate or eliminate intense emotional pain a quick fix where a long term effective solution is needed and this understanding is the underpinning of the assessment and treatment strategies the authors recommend The content of this new edition has been thoroughly reviewed and revised and substantive changes have been made to specific chapters to ensure that the book represents the most current thinking and research while retaining the strengths of the previous edition The chapter on assessment has been revised to put the fundamental components of effective treatment in a clinical case oriented context and includes an easy to use assessment protocol that allows clinicians to determine where individual patients stand on seven dimensions cognitive rigidity problem solving deficits heightened mental

pain emotionally avoidant coping style interpersonal deficits self control deficits and environmental stress and social support deficits The many issues involved in the use of psychotropic medications in suicidal patients are addressed in a new chapter which includes information on the relevant classes of drugs such as antidepressants and anti-anxiety agents and the issues that may arise with their use including side effects degree of lethality and tendency to aggravate suicidality on introduction and withdrawal of the medication The chapter on special populations has been expanded to include adolescents elders and patients with co-occurring substance abuse or psychosis Because of additional vulnerabilities treating these groups may call for the use of added or special techniques to ensure the best therapeutic outcomes Primary care physicians are the first point of contact for many patients and they may require additional preparation in order to assess and respond to those experiencing suicidal thoughts The chapter Suicidal Patients in Primary Care explores strategies for screening recognizing and assessing risk treating the initial crisis and developing a crisis management plan Tips for Success appear at intervals and The Essentials are included at the end of each chapter highlighting the most important concepts In addition there are scores of helpful charts and exercises Practical accessible and reader friendly the Clinical Manual for Assessment and Treatment of Suicidal Patients is not an academic book but rather is one designed to become an indispensable part of clinicians working libraries

Suicide Bruce Michael Bongar, 1992 Each year almost 30 000 individuals take their own lives making suicide the eighth leading cause of death in the United States The data on completed suicide become all the more disturbing when one considers that completed suicides represent only a small percentage of the number of attempts that suicide may be statistically underreported and that the rates of suicide in many industrialized countries are increasing Suicide has likewise been found to be the most frequently encountered emergency situation for mental health professionals with clinicians consistently ranking work with suicidal patients as the most stressful of all clinical endeavors Combining the clinical experience and practical recommendations of some of the world's foremost authorities on suicidal and life threatening behaviors Suicide Guidelines for Assessment Management and Treatment is designed to fill current gaps in the training efforts of the mental health and health care professions in teaching clinicians how best to work with suicidal patients The chapters are constructed as modules that cover a specific topic in a basic curriculum on suicidology and include workable practice guidelines that are both essential and up to date Topics include theories of suicide epidemiology of suicide biological research understanding child and youth suicide and suicide among the elderly procedures for detection of high risk factors emergency room care hospitalization and its alternatives psychopharmacological treatments psychological assessment cognitive and psychodynamic approaches to working with suicidal patients training and supervision of mental health professionals in the study of suicide postvention malpractice and risk management and forensic issues in suicidology By bringing together in one landmark volume the cumulative clinical wisdom of many of the pre-eminent experts in suicidology this book for the first time provides the practitioner and practitioner in training with a set of clear and useful guidelines for

working with the suicidal patient in clinical practice As such it will have broad appeal to psychologists psychiatrists social workers marriage and family therapists and other mental health professionals as well as to primary care physicians nurses and other health care professionals
