Triangulating Translation Fábio Alves dos Santos, 2003-01-01 The articles which appear in this volume stem from papers presented in a sub section of the II Brazilian International Translators Forum dedicated to process oriented research in translation The congress s main theme namely Translating the Millennium Corpora Cognition and Cultures is reflected in the seven contributions which aim at fostering the dialogue among translation researchers interested in process oriented investigations This book highlights one of the main axes focusing on the interfaces between cognition and translation and more precisely on the investigation of translation processes from three main vantage points theoretical perspectives empirical investigations and pedagogical applications

Cross-Linguistic Corpora for the Study of Translations Silvia Hansen-Schirra, Stella Neumann, Erich Steiner, 2012-12-06 The book specifies a corpus architecture including annotation and querying techniques and its implementation The corpus architecture is developed for empirical studies of translations and beyond those for the study of texts which are inter lingually comparable particularly texts of similar registers The compiled corpus CroCo is a resource for research and is with some copyright restrictions accessible to other research projects Most of the research was undertaken as part of a DFG Project into linguistic properties of translations Fundamentally this research project was a corpus based investigation into the language pair English German The long term goal is a contribution to the study of translation as a contact variety and beyond this to language comparison and language contact more generally with the language pair English German as our object languages This goal implies a thorough interest in possible specific properties of translations and beyond this in an empirical translation theory The methodology developed is not restricted to the traditional exclusively system based comparison of earlier days where real text excerpts or constructed examples are used as mere illustrations of assumptions and claims but instead implements an empirical research strategy involving structured data the sub corpora and their relationships to each other annotated and aligned on various theoretically motivated levels of representation the formation of hypotheses and their operationalizations statistics on the data critical examinations of their significance and interpretation against the background of system based comparisons and other independent sources of explanation for the phenomena observed Further applications of the resource developed in computational linguistics are outlined and evaluated
