Mathematics for Secondary School Teachers Elizabeth G. Bremigan, Ralph J. Bremigan, John D. Lorch, 2011 Mathematics for Secondary School Teachers discusses topics of central importance in the secondary school mathematics curriculum including functions polynomials trigonometry exponential and logarithmic functions number and operation and measurement Acknowledging diversity in the mathematical backgrounds of pre-service teachers and in the goals of teacher preparation programs the authors have written a flexible text through which instructors can emphasize any of the following Basics exploration of key pre-college topics from intuitive and rigorous points of view Connections exploration of relationships among topics using tools from college level mathematics Extensions exploration of college level mathematical topics that have a compelling relationship to pre-college mathematics Mathematics for Secondary School Teachers provides a balance of discovery learning and direct instruction Activities and exercises address the range of learning objectives appropriate for future teachers Beyond the obvious goals of conceptual understanding and computational fluency readers are invited to devise mathematical explanations and arguments create examples and visual representations remediate typical student errors and misconceptions and analyze student work Introductory discussion questions encourage prospective teachers to take stock of their knowledge of pre-college topics A rich collection of exercises of widely varying degrees of difficulty is integrated with the text Activities and exercises are easily adapted to the settings of individual assignments group projects and classroom discussions Mathematics for Secondary School Teachers is primarily intended as the text for a bridge or capstone course for pre-service secondary school mathematics teachers It can also be used in alternative licensure programs as a supplement to a mathematics methods course as the text for a graduate course for in-service teachers and as a resource and reference for in-service faculty development

Music by the Numbers Eli Maor, 2018-05-15 How music has influenced mathematics physics and astronomy from ancient Greece to the twentieth century Music is filled with mathematical elements the works of Bach are often said to possess a math like logic and Igor Stravinsky said musical form is close to mathematics while Arnold Schoenberg Iannis Xenakis and Karlheinz Stockhausen went further writing music explicitly based on mathematical principles Yet Eli Maor argues that music has influenced math at least as much as math has influenced music Starting with Pythagoras proceeding through the work of Schoenberg and ending with contemporary string theory Music by the Numbers tells a fascinating story of composers scientists inventors and eccentrics who played a role in the age old relationship between music mathematics and the sciences especially physics and astronomy Music by the Numbers explores key moments in this history particularly how problems originating in music have inspired mathematicians for centuries Perhaps the most famous of these problems is the vibrating string which pitted some of the greatest mathematicians of the eighteenth century against each other in a debate that lasted more than fifty years and that eventually led to the development of post calculus mathematics Other highlights in the book include a comparison between meter in music and metric in geometry complete with examples of rhythmic patterns from Bach to Stravinsky and an exploration of a suggestive twentieth century development the nearly simultaneous emergence of Einstein's theory of relativity and Schoenberg's twelve tone system Weaving these compelling historical episodes with Maor's personal reflections as a mathematician and lover of classical
