Tropical Forest Remnants Ecology Management And Conservation Of Fragmented Communities:

Tropical Forest Remnants William F. Laurance, Richard O. Bierregaard, 1997-06-21 We live in an increasingly fragmented world with islands of natural habitat cast adrift in a sea of cleared burned logged polluted and otherwise altered lands Nowhere are fragmentation and its devastating effects more evident than in the tropical forests By the year 2000 more than half of these forests will have been cut causing increased soil erosion watershed destabilization climate degradation and extinction of as many as 600 000 species Tropical Forest Remnants provides the best information available to help us understand manage and conserve the remaining fragments Covering geographic areas from Southeast Asia and Australia to Madagascar and the New World this volume summarizes what is known about the ecology management restoration socioeconomics and conservation of fragmented forests Thirty three papers present results of recent research as well as updates from decades long projects in progress Two final chapters synthesize the state of research on tropical forest fragmentation and identify key priorities for future work *Living in a Dynamic Tropical Forest Landscape* Nigel Stork, Stephen M. Turton, 2009-01-26 This book brings together a wealth of scientific findings and ecological knowledge to survey what we have learned about the Wet Tropics rainforests of North Queensland Australia This interdisciplinary text is the first book to provide such a holistic view of any tropical forest environment including the social and economic dimensions The most thorough assessment of a tropical forest landscape to date Explores significant scientific breakthroughs in areas including conservation genetics vegetation modeling agroforestry and revegetation techniques biodiversity assessment and modeling impacts of climate change and the integration of science in natural resource management Research achieved in part due to the Cooperative Research Centre for Tropical Rainforest Ecology and Management the Rainforest CRC Written by a number of distinguished international experts contains chapter summaries and section commentaries *Biodiversity Loss and Conservation in Fragmented Forest Landscapes* Adrian C. Newton, 2007-01-01 This book is the result of an international collaborative research effort focusing on the tropical montane forests of Mexico and the temperate rain forests of southern South America The overall aim of the research was to investigate the impact of human activity on the key processes influencing biodiversity in fragmented forest landscapes and to use the research results to develop practical tools for evaluating land use decisions thereby indicating how sustainable forest management might be achieved in practice

Tropical Forests and Global Atmospheric Change Yadvinder Malhi, Oliver Phillips, 2005-06-30 Ecosystem processes biogeochemical responses drought contemporary change **Mountain Ash** David Lindenmayer, David Blair, Lachlan McBurney, Sam Banks, 2015-11-02 Mountain Ash draws together exciting new findings on the effects of fire and on post fire ecological dynamics following the 2009 wildfires in the Mountain Ash forests of the Central Highlands of Victoria The book integrates data on forests carbon fire dynamics and other factors building on 6 years of high quality multi faceted research coupled with 25 years of pre fire insights Topics include the unexpected effects of fires of varying severity on populations of

large old trees and their implications for the dynamics of forest ecosystems relationships between forest structure condition and age and their impacts on fire severity relationships between logging and fire severity the unexpectedly low level of carbon stock losses from burned forests including those burned at very high severity impacts of fire at the site and landscape levels on arboreal marsupials persistence of small mammals and birds on burned sites including areas subject to high severity fire and its implications for understanding how species in this group exhibit post fire recovery patterns With spectacular images of the post fire environment Mountain Ash will be an important reference for scientists and students with interests in biodiversity forests and fire

How Landscapes Change Gay A. Bradshaw, Pablo A. Marquet, 2013-03-09 North and South America share similar human and ecological histories and increasingly economic and social linkages As such issues of ecosystem functions and disruptions form a common thread among these cultures This volume synthesizes the perspectives of several disciplines such as ecology anthropology economy and conservation biology The chief goal is to gain an understanding of how human and ecological processes interact to affect ecosystem functions and species in the Americas Throughout the text the emphasis is placed on habitat fragmentation At the same time the book provides an overview of current theory methods and approaches used in the analysis of ecosystem disruptions and fragmentation

Biodiversity Conservation in Costa Rica Gordon W. Frankie, Alfonso Mata, S. Bradleigh Vinson, 2025-03-21 The beautiful tropical dry forest of northwest Costa Rica with its highly seasonal rainfall and diversely vegetated landscape is disappearing even more rapidly than Costa Rica's better known rain forest primarily because it has been easier to convert to agriculture This book based on more than thirty years of study offers the first comprehensive look at the ecology biodiversity and conservation status of this endangered and fragile region The contributors from Costa Rica Britain Mexico and the United States and representing the fields of ecology environmental education policy and the law examine the major plant and animal groups living in the dry forest and present the first technical evaluation of Costa Rica's conservation efforts As they assess the status of their area of specialty in the dry forest the contributors also look beyond this particular region to show how its plants and animals are ecologically and evolutionarily connected to other geographic areas in Costa Rica and Central America Their chapters cover topics such as watershed and coastal management plant phenology pollination insects birds mammals amphibians and reptiles They also consider the socioeconomic policy legal and political aspects of biodiversity conservation giving the volume a wide ranging perspective and making a unique contribution to our knowledge of the tropical dry forest The book concludes with an important synthesis of the contributors recommendations on future directions policies and actions that will better conserve biodiversity in Costa Rica and other neotropical forests as well This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 2005

Emerging Threats to Tropical Forests William F. Laurance, Carlos A. Peres, 2006-10 Publisher Description **Forest Canopies** Margaret Lowman, H. Bruce Rinker, 2004-09 The treetops of the world's forests are where discovery and opportunity abound; however, they have been relatively inaccessible until recently. This book represents an authoritative synthesis of data, anecdotes, case studies, observations, and recommendations from researchers and educators who have risked life and limb in their advocacy of the High Frontier. With innovative rope techniques, cranes, walkways, dirigibles, and towers, they finally gained access to the rich biodiversity that lives far above the forest floor and the emerging science of canopy ecology. In this new edition of *Forest Canopies*, nearly 60 scientists and educators from around the world look at the biodiversity, ecology, evolution, and conservation of forest canopy ecosystems. Comprehensive literature list. State-of-the-art results and data sets from current field work. Foremost scientists in the field of canopy ecology. Expanded collaboration of researchers and international projects. User-friendly format with sidebars and case studies. Keywords and outlines for each chapter.

Biotic Interactions in the Tropics David Burslem, Michelle Pinard, Sue Hartley, 2005-09-08 Tropical ecosystems house a significant proportion of global biodiversity. To understand how these ecosystems function, we need to appreciate not only what plants, animals, and microbes they contain but also how they interact with each other. This volume, first published in 2005, synthesizes the state of knowledge in this area with chapters providing reviews or case studies drawn from research conducted in both Old and New World tropics and including biotic interactions among taxa at all trophic levels. In most chapters, plants (typically trees) are the starting point, but taken together, the chapters consider interactions of plants with other plants, with microorganisms, and with animals, and the interrelationships of human-induced disturbance with interactions among species. An underlying theme of the volume is the attempt to understand the maintenance of high diversity in tropical regions, which remains one of the most significant unexplained observations in ecological studies.

The Forests Handbook, Volume 1 Julian Evans, 2008-04-15 The future of the world's forests is at the forefront of environmental debate. Rising concerns over the effects of deforestation and climate change are highlighting the need both to conserve and manage existing forests and woodland through sustainable forestry practices. The *Forests Handbook*, written by an international team of both scientists and practitioners, presents an integrated approach to forests and forestry, applying our present understanding of forest science to management practices as a basis for achieving sustainability. Volume One presents an overview of the world's forests, their locations, and what they are like; the science of how they operate as complex ecosystems and how they interact with their environment. Volume Two applies this science to reality; it focuses on forestry interventions and their impact, the principles governing how to protect forests, and on how we can better harness the enormous benefits forests offer. Case studies are drawn from several different countries and are used to illustrate the key points. Development specialists, forest managers, and those involved with land and land use will find this handbook a valuable and comprehensive overview of forest science and forestry practice. Researchers and students of forestry, biology, ecology, and

geography will find it equally accessible and useful

Ringtailed Lemur Biology Alison Jolly, Robert W. Sussman, Naoki Koyama, Hanta Rasamimanana, 2006-11-30 This book is a truly international collaboration with editors based on four continents and first authors from Canada France Japan Madagascar the United Kingdom and the United States Clearly there is something attractive about studying Lemur catta the ringtailed lemur Perhaps it is the lemurs themselves Why study ringtailed lemurs Because lemurs are a separate radiation of primates from the monkeys apes and humans Because ringtails live in the largest social groups of any known lemur and therefore offer the closest comparison with other social primates including ourselves And also because ringtails have become the flagship species of Madagascar Some 70 species or subspecies of lemurs inhabit Madagascar Each kind has its own fascinating story but ringtails are the ones that everyone thinks they know That black and white tail adorns tourist brochures and school notebooks and banknotes All the same after 40 years of field study we don't know nearly enough In this book we make a first estimate on how many might be alive today but we do not know how many ringtailed lemurs and how many southern forests will survive This book explores part of what we do know Its four sections are I Distribution Ringtailed Lemurs in Madagascar II Ringtails and Their Forests Feeding and Ranging Behavior III Social Behavior Within and Between Troops and finally IV Health and Disease Of course all these issues are interrelated
